**Headhood, Elements, Specification and Contrastivity** Philip Carr, Jacques Durand, Colin J. Ewen, 2005 The papers in this volume focus on notions which are central to the work of John M Anderson the founder of Dependency Phonology and to phonological theory the idea of structural analogy between phonology and syntax the head dependent relation the idea that phonological representations are best conceived of in terms of a set of privative elements rather than as binary valued features and the related notions of contrastivity and specification and non specification An important issue dealt with is the relationship between specification and derivationality and the question whether derivations are necessary in phonological theory Many of the contributions provide sound empirical support for the appeal to elements and to headhood at all levels of phonological analysis The book will be of interest to anyone interested in current issues in phonological theory

Disaster Management in the Complex Himalayan

Terrains Shruti Kanga, Gowhar Meraj, Majid Farooq, Suraj Kumar Singh, Mahendra Singh Nathawat, 2022-02-02 South Asia harboring the complex Himalayan terrains has over one fifth of the world's population and is recognized as the most hazard prone region of the world. The exponential increase in population with the consequent pressure on natural resources and continued high rates of poverty and food insecurity also makes this region the most vulnerable region to hazards in the world as far as the impacts of climate change are concerned. Over the last century the climatic trends in South Asia have been observed to be characterized by increasing air temperatures and an increasing trend in the intensity and frequency of extreme events. IPCC 2014 has reported that the Himalayan highlands shall face significant warming over the next century. The increasing frequency of natural hazards due to the impacts of climate change in the Himalayas calls for efficient management and policymaking in these regions which can only be implemented by the local governments through an established science based robust action plan. This edited volume focuses on the management of natural hazards using innovative techniques of spatial information sciences and satellite remote sensing. It contains chapters from eminent researchers and experts in the field of hazard management, remote sensing and GIS. The primary focus of this book is to replenish the gap in the available literature on the subject by bringing the concepts, theories and practical experiences of the specialists and professionals in this field together in one volume to help students, researchers and policymakers to address issues concerning management and policy implications of natural hazards in the complex Himalayan region.
