*The Secret of Apollo* Stephen B. Johnson, 2006-10-31 Winner of the Emme Award for Astronautical Literature from the American Astronautical Society How does one go about organizing something as complicated as a strategic missile or space exploration program Stephen B Johnson here explores the answer systems management in a groundbreaking study that involves Air Force planners scientists technical specialists and eventually bureaucrats Taking a comparative approach Johnson focuses on the theory or intellectual history of systems engineering as such its origins in the Air Force's Cold War ICBM efforts and its migration to not only NASA but the European Space Agency Exploring the history and politics of aerospace development and weapons procurement Johnson examines how scientists and engineers created the systems management process to coordinate large scale technology development and how managers and military officers gained control of that process Those funding the race demanded results Johnson explains In response development organizations created what few expected and what even fewer wanted a bureaucracy for innovation To begin to understand this apparent contradiction in terms we must first understand the exacting nature of space technologies and the concerns of those who create them

Christophe Rothmund, Rick W. Sturdevant, 2010 In this volume the American Astronautical Society's history series presents 23 papers delivered at the 35th History of the International Academy of Astronautics held in Toulouse France in early October 2001 This took place as part of the 52nd International Astronautical Federation IAF Congress meeting at this time and place Following recent tradition the papers do not appear in symposium order but have been arranged for the reader's

convenience by topic These symposia continue to emphasize the shift in focus away from events before World War II and toward worldwide developments occurring after 1945 they also examine topics drawn from a wider range of subjects Personal narratives are less numerous and of particular interest to the reader will be the papers devoted to examining hitherto unknown aspects of IAF history The editor would like to dedicate this volume to the victims and heroes of the 9 11 terrorist attacks that made 2001 a year of infamy and also to the victims of Toulouse s chemical plant explosion on 21 September 2001 They all were at our sides during the Congress and have been ever since Excerpted from Preface p ix by Christophe Rothmund Volume Editor Snecma Space Engines Division Atomic Audit Stephen I. Schwartz, 2011-12-01 Since 1945 the United States has manufactured and deployed more than 70 000 nuclear weapons to deter and if necessary fight a nuclear war Some observers believe the absence of a third world war confirms that these weapons were a prudent and cost effective response to the uncertainty and fear surrounding the Soviet Union s military and political ambitions during the cold war As early as 1950 nuclear weapons were considered relatively inexpensive providing a bigger bang for a buck and were thoroughly integrated into U S forces on that basis Yet this assumption was never validated Indeed for more than fifty years scant attention has been paid to the enormous costs of this effort more than 5 trillion thus far and its short and long term consequences for the nation Based on four years of extensive research Atomic Audit is the first book to document the comprehensive costs of U S nuclear weapons assembling for the first time anywhere the actual and estimated expenditures for the program since its creation in 1940 The authors provide a unique perspective on U S nuclear policy and nuclear weapons tracking their development from the Manhattan Project of World War II to the present day and assessing each aspect of the program including research development testing and production deployment command control communications and intelligence and defensive measures They also examine the costs of dismantling nuclear weapons the management and disposal of large quantities of toxic and radioactive wastes left over from their production compensation for persons harmed by nuclear weapons activities nuclear secrecy and the economic implications of nuclear deterrence Utilizing archival and newly declassified government documents and data this richly documented book demonstrates how a variety of factors the open ended nature of nuclear deterrence faulty assumptions about the cost effectiveness of nuclear weapons regular misrepresentation of and overreaction to the Soviet threat the desire to maintain nuclear superiority bureaucratic and often arbitrary decisions pork barrel politics and excessive secrecy all drove the acquisition of an arsenal far larger than what many contemporary civilian and military leaders deemed necessary Atomic Audit concludes with recommendations for strengthening atomic accountability and fostering greater public understanding of nuclear weapons programs and policies
