The German Jets In Combat:

The German Jets in Combat Jeffrey L. Ethell, Alfred Price, 1979 The Jet Race and the Second World War S. Mike Pavelec, 2007-02-28 In the 1930s as nations braced for war the German military build up caught Britain and the United States off guard particularly in aviation technology The unending quest for speed resulted in the need for radical alternatives to piston engines In Germany Dr Hans von Ohain was the first to complete a flight worthy turbojet engine for aircraft It was installed in a Heinkel designed aircraft and the Germans began the jet age on August 27 1939 The Germans led the jet race throughout the war and were the first to produce jet aircraft for combat operations In England the doggedly determined Frank Whittle also developed a turbojet engine but without the support enjoyed by his German counterpart The British came second in the jet race when Whittle s engine powered the Gloster Pioneer on May 15 1941 The Whittle Gloster relationship continued and produced the only Allied combat jet aircraft during the war the Meteor which was relegated to Home Defense in Britain In America General Electric copied the Whittle designs and Bell Aircraft contracted to build the first American jet plane On October 1 1942 a lackluster performance from the Bell Airacomet ushered in the American jet age The Yanks forged ahead and had numerous engine and airframe programs in development by the end of the war But the Germans did it right and did it first while the Allies lagged throughout the war only rising to technological prominence on the ashes of the German defeat Pavelec s analysis of the jet race uncovers all the excitement in the high stakes race to develop effective jet engines for warfare and transport **German Jets of World War II** Dominique Breffort, Andre Jouineau, 2012-11-19 Germany was not only the first country to get a jet aircraft to fly but above all it was the only country fighting in World War Two to mass produce and above all engage several types of aircraft using this new kind of power plant in the fighting thus opening the way for air warfare as we know it nowadays This new volume in the collection Planes and Pilots which wittingly ignores the myriad of jet aircraft projects which the Germans thought up all during the war most of which never got beyond the drawing board only deals with the machines which were built in enough numbers to be used operationally The Messerschmitt Me 163 rocket fighter more dangerous for its pilots than for its opponents the twin engined Arado 234 better at reconnaissance than at bombing which was its intended role the Heinkel He 162 the People s Fighter built in record time but arriving too late to prove the effectiveness of its design and above all the Messerschmitt Me 262 the real star among the German fighters during the last year of the war and whose tally of kills gives a glimpse of the real impact on the course of the war it might have had had its development not been so considerably delayed by innumerable technical problems and for a while by crass strategic errors **Aircraft in the German War** Hugo Massac Buist, 1914 Beskrivelse af de f rste anvendelser af flyvemaskinen i luftkrigsoperationer *The History of Combat Airplanes* Charles Grey Grey, 1942 The Cutting Edge Mark A. Lorell, Hugh P. Levaux, Elizabeth Giddens, Jennifer Gross, Erik Moller, 1998-10-20 The proposition that innovation is critical in the cost effective design and development of successful military aircraft is still subject to some debate

RAND research indicates that innovation is promoted by intense competition among three or more industry competitors. Given the critical policy importance of this issue in the current environment of drastic consolidation of the aerospace defense industry, the authors here examine the history of the major prime contractors in developing jet fighters since World War II. They make use of an extensive RAND database that includes nearly all jet fighters, fighter attack aircraft, and bombers developed and flown by U.S. industry since 1945, as well as all related prototypes, modifications, upgrades, etc. The report concludes that 1) experience matters because of the tendency to specialize and thus to develop system-specific expertise; 2) yet the most dramatic innovations and breakthroughs came from secondary or marginal players trying to compete with the industry leaders; and 3) dedicated military R & D conducted or directly funded by the U.S. government has been critical in the development of new, higher performance fighters and bombers.

The Luftwaffe James S. Corum, 1997. This study provides an appraisal of Germany's air forces from the post-World War I era through the early stages of World War II. The Roots of Blitzkrieg James S. Corum, 1992. Following Germany's defeat in World War I, the Germans signed the Versailles Treaty, theoretically agreeing to limit their war powers. The Allies envisioned the future German army as a lightly armed border guard and international security force. The Germans had other plans.

Based on an unparalleled access to Russian archival sources and going far beyond the military aspects of other historical works, Glantz's book is a testament to the nearly two million Russians who lost their lives during the battle for Leningrad. 90 illustrations, 16 maps.

Fighting with the Soviets Mark J. Conversino, 1997. Conversino's story is as interesting as it is unfamiliar and succeeds in opening up Frantic's many dimensions, including the personal as well as the political, strategic, and operational. His revelations regarding the interactions between American servicemen and Ukrainian Russians are especially valuable and underscore the immense difficulties of implementing alliances at the grass roots level.
