**The hidden target [braille].** ,1982      Theory and Technology of Laser Imaging Based Target Detection Yihua Hu,2017-06-23 This book systematically introduces readers to laser imaging target detection principles and techniques It covers the fundamentals of laser imaging and presents an extensive up to date analysis of how to best use laser imaging to detect targets This is followed by a comprehensive discussion of laser imaging target detection principles laser imaging generation and target detection methods The book offers an invaluable resource for researchers especially those who are engaged in the fields including target detection based on a laser imaging system target detection and identification remote sensing imaging and image processing Additionally it can be used as a reference book for advanced undergraduates and postgraduates of relevant majors      *Hidden Target* Commando,      *Image-guided and Adaptive Radiation Therapy* Robert D. Timmerman,Lei Xing,2009-10-01 This book provides detailed state of the art information and guidelines on the latest developments innovations and clinical procedures in image guided and adaptive radiation therapy The first section discusses key methodological and technological issues in image guided and adaptive radiation therapy including use of implanted fiducial markers management of respiratory motion image guided stereotactic radiosurgery and stereotactic body radiation therapy three dimensional conformal brachytherapy target definition and localization and PET CT and biologically conformal radiation therapy The second section provides practical clinical information on image guided adaptive radiation therapy for cancers at all common anatomic sites and for pediatric cancers The third section offers practical guidelines for establishing an effective image guided adaptive radiation therapy program      *Scattering Theory and Biomedical Engineering Modelling and Applications* George Dassios,2000 This book addresses issues of scattering theory and biomedical engineering as well as methodological approaches and tools from related scientific areas such as applied mathematics mechanics numerical analysis and signal and image processing      **Research Progress in Alzheimer's Disease and Dementia** Miao-Kun Sun,2007 Alzheimer s disease AD is the most common type of neurodegenerative disorder in the ageing population with dementia as a common consequence AD is defined pathologically by the appearance of extracellular senile plaques and intracellular neurofibrillary tangles as described by Alois Alzheimer about a century ago The causes for AD include genetic predisposition in a small population ageing and environmental stresses in majority cases The underlying pathogenic cascades increases in expression of amyloid precursor protein and accumulation of A and reactive oxidant activity and inflammation have the features of both adaptive at least initially and harmful when becoming excessive Dementia on the other hand is a clinical diagnosis and is defined as globally persistently impaired cognitive skills including memory Alzheimer dementia refers to clinical dementia in patients who also have Alzheimer neuropathology Alzheimer dementia is what brings the patients to seek medical treatments An extraordinary inability to form new memory especially of those episodic type and executive dysfunction are among the earliest symptoms in AD patients In end stage AD cognitive degeneration extends far beyond

memory loss The underlying causes include decreases in impaired brain metabolism which results in impaired synaptic functions and capacities thus impaired information processing and eventually leads to neuronal injury and death This book presents leading edge research in this dynamic field      How and Why Does Spatial-Hearing Ability Differ among Listeners? What Is the Role of Learning and Multisensory Interactions? Guillaume Andéol, Brian D. Simpson, Ewan A. Macpherson, 2016-08-29 Spatial hearing ability has been found to vary widely across listeners A survey of the existing auditory space perception literature suggests that three main types of factors may account for this variability physical factors e g acoustical characteristics related to sound localization cues perceptual factors e g sensory cognitive processing perceptual learning multisensory interactions and methodological factors e g differences in stimulus presentation methods across studies However the extent to which these and perhaps other still unidentified factors actually contribute to the observed variability in spatial hearing across individuals with normal hearing or within special populations e g hearing impaired listeners remains largely unknown Likewise the role of perceptual learning and multisensory interactions in the emergence of a multimodal but unified representation of auditory space is still an active topic of research A better characterization and understanding of the determinants of inter individual variability in spatial hearing and of its relationship with perceptual learning and multisensory interactions would have numerous benefits In particular it would enhance the design of rehabilitative devices and of human machine interfaces involving auditory or multimodal space perception such as virtual auditory multimodal displays in aeronautics or navigational aids for the visually impaired For this Research Topic we have considered manuscripts that present new methods or review existing methods for the study of inter individual differences present new data or review existing data concerning acoustical features relevant for explaining inter individual differences in sound localization performance present new or review existing psychophysical or neurophysiological findings concerning spatial hearing and or auditory perceptual learning and or multisensory interactions in humans normal or impaired young or older listeners or other species discuss the influence of inter individual differences on the design and use of assistive listening devices rehabilitation or human machine interfaces involving spatial hearing or multimodal perception of space ergonomics      *Eye Movements and Visual Cognition* Raymond M. Klein , Simon P. Liversedge, 2020-12-29 This eBook is a volume based on the Eye Movements and Visual Cognition Special Issue published in the journal Vision by MDPI and edited by Raymond Klein and Simon Liversedge The eBook comprises 19 high quality chapters that are original and topical works by leading academic figures in the field of human vision and visual cognition In putting together the book we aimed to provide an informative body of work to stimulate and foster useful intellectual exchange between individuals working on basic theoretical issues as well as on more applied aspects of vision and cognitive science From the outset we sought papers that provide concise and astute reviews of topics within this broad field The present volume includes reviews that are narrative critiquing and summarizing research on a topic tutorial with a focus on methods and findings empirical e g meta

analytic and theoretically synthetic The eBook also features chapters with new empirical content that resolves an undecided issue stemming from an evaluation of the literature Finally where possible we also selected papers that bridge theoretical and applied issues and provide insight into behavior and its neural substrate All chapters were subject to peer review and went through several rounds of revision prior to acceptance

**On Weak Learning** David Helmbold,Manfred Warmuth,1992 Abstract An algorithm is a weak learning algorithm if with some small probability it outputs a hypothesis with error slightly below 50% This paper presents relationships between weak learning weak prediction where the probability of being correct is slightly larger than 50% and consistency oracles which decide whether or not a given set of examples is consistent with a concept in the class Our main result is a simple polynomial prediction algorithm which makes only a single query to a consistency oracle and whose predictions have a polynomial edge over random guessing We compare this prediction algorithm with several of the standard prediction techniques deriving an improved worst case bound on Gibbs Algorithm in the process We use our algorithm to show that a concept class is polynomially learnable if and only if there is a polynomial probabilistic consistency oracle for the class Since strong learning algorithms can be built from weak learning algorithms our results also characterizes sic strong learnability
