

**Objectivity: An Introduction**

Students demonstrate an understanding of engineering problem-solving techniques simply from the knowledge already provided by learning the principles of thermodynamics. The key to understanding the introduction of design is to present the primary responsibility associated with design. The typical engineering culture does not require every student who goes to the university that provides creative input, technical thinking skills, problem-solving skills, design or design-related. The student is expected to make good design, and it is not expected that a young faculty member is responsible to the organization when responsible design is demonstrated. Engineering is a process of understanding the problem, then determining the solution, and applying the solution to the problem. The student is expected to make good design, and it is not expected that a young faculty member is responsible to the organization when responsible design is demonstrated.
