Spectrometry Of Fuels:

Spectrometry of Fuels R. A. Friedel, 2012-12-06 Fuels represent an important aspect of world economy. The study of the chemical properties and compositions of fuels is necessary to provide a better understanding of their reactions and possibly to promote their improved commercial utilization. Spectrometry comprises a valuable group of tools and techniques for the study of fuels and their derivatives. Some of the undesirable by products from fuels specifically pollutants provide the spectroscopist with an additional vast area for the application of his tools. The fight against pollution of all kinds has spawned one of our most rapidly growing industries. It thus seems pertinent to devote a book to the spectrometric investigation of fuels and related materials. This book is intended to be of interest to people concerned with fuels with related chemicals with applications of the newest spectral methods or with organic and physical chemistry. The purpose of the book is threefold 1 To give details of 23 new researches using modern spectral methods on fuels and related materials 2 to give the reader some feeling for these modern techniques and their applications and 3 to provide him with indications of material for further reading. The book is not intended to cover details of specific analyses of fuels or of fuel derivatives such as gasoline, lubricating oil, coal gas etc considerable space in other books and in journals has been devoted to these subjects.

The method employs a short column 3 m by 0.25 mm inside diameter by 1.0 m thick film DB 5 capillary for sample introduction into the mass spectrometer. The calculational aspects of the technique are based on the current ASTM Test Method for Hydrocarbon Types in Low Olefinic Gasoline by Mass Spectrometry D 2789 86 inverse calibration matrices. An evaluation of component discrimination with GC introduction was performed as a function of injection port temperatures and injection methods. The analytical figures of merit such as sensitivity and limit of detection were determined. Comparisons between the GC MS HTA and ASTM D 2789 86 results of several test fuels were made. Additionally several synthetically prepared fuels were analyzed by the GC MS HTA method in order to evaluate the accuracy of the method.
