The Development of Coordination in Infancy G.J.P. Savelsbergh, 1993-03-12 This volume attempts to bring together a collection of current approaches to and related empirical investigations on the development of coordination in the first two years of life It will be of interest to scientists and students in for example biology human movement sciences kinesiology psychology pediatrics physiology physical education physical therapy and robotics Contributors include those with established reputations in the field as well as young authors who are beginning to make their mark Their efforts resulted in twenty chapters of which seventeen were invited The chapters have been divided into four sections The first chapter is intended to outline the structure of the book **Motor Development in Children: Aspects of Coordination and Control** M.G. Wade, H.T.A Whiting, 2011-09-27 This book is divided into sections Each section is devoted to a particular issue in Motor Development and comprises two or more contributions The order of presentation mirrors the order of presentation at the Institute and thus is not entirely fortuitous Nevertheless it does not reflect any value judgement on the part of the editors as to the importance of anyone issue in comparison to others addressed in the book This volume is to be seen as a companion volume to Themes in Motor Development in which the more specific topics presented during the Institute are published Together the two volumes provide both a general and theme specific approach to this expanding field of knowledge XI PREFACE Books and conferences on what in North America is euphemistically termed motor development have been few and far between in the past 25 years This is not to say that the study of how children acquire and develop motor skills has not been a subject on which scientists have focused their attention In the United States in the 1930 s and 1940 s Bayley 1935 and Gesell and Amatruda 1947 described and scaled the rates at which young children acquired motor skills In Europe the development of childrens motor behaviour was of theoretical interest to Piaget 1952 *Development of Movement Coordination in Children* Geert Savelsbergh, Keith Davids, John van der Kamp, Simon J.
