Microsoft Transaction Server which can be used to provide a variety of services to ASP components The objects properties methods and events available in the ASP object model Because more and more developers find themselves using more than a single language tool the remaining three sections of the book each focus on ASP component development using any of the three major development tools Microsoft Visual Basic Microsoft Visual C and the ActiveX Template Library ATL and Microsoft J Each section carefully focuses on the issues that concern the ASP component developer who is using that particular development environment These include Accessing ASP s intrinsic objects Accessing data using either OLE DB in the case of C or ADO in the case of VB and J Creating n tier web applications with VB Handling persistence using MFC along with Visual C ATL Accessing native code the Windows libraries which are written in C from J This thorough coverage of the background information needed for developing ASP components as well as its focus on the component development in each of three major development environments makes Developing ASP Components the definitive resource for the ASP application and component developer
