**An Introductory Philosophy of Medicine** James A.

Marcum,2008-05-07 In this book the author explores the shifting philosophical boundaries of modern medical knowledge and practice occasioned by the crisis of quality of care especially in terms of the various humanistic adjustments to the biomedical model To that end he examines the metaphysical epistemological and ethical boundaries of these medical models He begins with their metaphysics analyzing the metaphysical positions and presuppositions and ontological commitments upon which medical knowledge and practice is founded Next he considers the epistemological issues that face these medical models particularly those driven by methodological procedures undertaken by epistemic agents to constitute medical knowledge and practice Finally he examines the axiological boundaries and the ethical implications of each model especially in terms of the physician patient relationship In a concluding Epilogue he discusses how the philosophical analysis of the humanization of modern medicine helps to address the crisis of care as well as the question of What is medicine The book's unique features include a comprehensive coverage of the various topics in the philosophy of medicine that have emerged over the past several decades and a philosophical context for embedding bioethical discussions The book's target audiences include both undergraduate and graduate students as well as healthcare professionals and professional philosophers This book is the 99th issue of the Series Philosophy and Medicine and it can be considered a crown of thirty years of intensive and dynamic discussion in the field We are completely convinced that after its publication it can be finally said that undoubtedly the philosophy of medicine exists as a special field of inquiry

GENERAL INTRODUCTION This study of the concept of health is an attempt to combine central ideas in modern philosophy of medicine with certain results from analytical action theory What emerges from the study is a concept of health based on an action theoretic foundation A person s health is characterized as his ability to achieve his vital goals The general conception is not new This study has been inspired by a number of scholars both ancient and modern The most important influences from the latter have been those of Georges Canguilhem H Tristram Engelhardt Jr Caroline Whitbeck and Ingmar P rn The novel aspect of this book consists of elaborations made to the general conception First the action theoretic platform is analysed in some detail The nature of the ability involved as well as the conditions for having that ability are specified Second the vital goals of man are given considerable attention Some previous attempts to define such vital goals are analysed and criticized A new characterization is proposed in which the vital goals are conceptually linked to the notion of happiness A person s vital goals are such states of affairs as are necessary and together sufficient for his minimal happiness Third a number of consequences of this con ception are observed and analysed One issue which is particularly empha sized is that ofwhether the concept ofhealth is a theoretical or a normative concept
