Spectral Atlas of Polycyclic Aromatic Compounds

W. Karcher,2013-06-29 Polycyclic Aromatic Compounds PAC are a broad class of compounds whose wide distribution in the environment results from incomplete combustion processes of fossil fuels in power generator industrial plant and domestic heating from car exhaust gas and from tobacco smoke Many PACs are biologically active and in particular many of the PACs with three or more fused rings are carcinogenic Currently there is concern of the occurrence of these pollutants at ppb ug kg 1 level However the predicted 2 to 3% annual increase in the rate of their release into the environment could lead to ppm ug g levels in the next century The move towards stricter control of these pollutants brings with it the need for accurate monitoring of their environmental occurrence Reliable identification and quantification of these compounds in complex environmental samples depends greatly on the availability of reference values for their physicochemical and biochemical properties This second volume results from a close collaboration within the General Directorate for Science Research and Development of the Commission of the European Communities between the Joint Research Centre Ispra Establishment the Community Bureau of Reference and expert laboratories of the Member States *Spectral Atlas of Polycyclic Aromatic Compounds* W. Karcher,J. Devillers,Ph. Garrigues,J. Jacob,1991-09-30 This volume is the 3rd in a series of comprehensive publications devoted to the molecular spectra and environmentally important properties of polycyclic aromatic compounds which constitute one of the most interesting classes of environmental carcinogens Since the first identification of dibenz a h anthracene and later benzo a pyrene as chemical carcinogens in the 1930 s the number of publications devoted to this ubiquitously occurring group of compounds has increased constantly Therefore this reference source for the spectral physicochemical and environmental properties of polycyclic aromatic compounds should be a welcome addition to the previous volumes for scientists engaged in the investigation characterisation and control of this hazardous class of pollutants As was the case with the preceding volume this publication is the fruit of a close collaboration within the General Directorate for Science Research and Development of the Commission of the European Communities between the Environment Institute of the Joint Research Centre Ispra the Community Bureau of Reference and expert laboratories in the member states F Geiss Director of the Environment Institute JRC Ispra 1 Introduction Polycyclic Aromatic Compounds PAC are an important class of carcinogenic environmental pollutants which occur in air water soils sediments in food and in the work area Because many hundreds of closely related isomers are being formed and released in the environment from combustion processes of fossil fuels and other organic materials their environmental and health control presents a difficult task National Library of Medicine Current Catalog National Library of Medicine (U.S.),1985 *Dibenzanthracenes and Environmental Carcinogenesis* Walter Karcher,1992-10-15 First published in 1992 this volume provides a systematic survey of the dibenzanthracenes and of their chemical physicochemical and biological properties The carcinogenic potential of the

dibenzanthracenes an important subclass of polycyclic aromatic hydrocarbons has been extensively studied and documented since their identification as animal skin carcinogens was first demonstrated in the 1930s the volume treats the nomenclature the chemical and physical properties and the synthesis and preparation of the five principal isomers of the dibenzanthracenes series dibenz a h dibenz a c dibenz aj anthracene benzo a naphthacene and pentacene Other chapters are devoted to their occurrence and analysis in the environment in industrial processes and effluents and in foodstuffs The second part addresses their biological activity and reviews the metabolism cellular interactions toxicology mutagenicity and carcinogenicity of the dibenzanthracenes The final chapter is devoted to structure activity relationships in this class of aromatic compounds This is the first comprehensive account of this important group of environmental pollutants and carcinogens It will be of interest to all scientists studying carcinogenesis and the mutagenicity and toxicology of environmental pollutants K *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70

Including Information on Aquatic Toxicity, Occurrence and Biological Activity, 1991 *Automobiles and Pollution* Paul Degobert, Explores the impact automobile emissions have on air pollution focusing on the share of pollution that can accurately be attributed to the use of vehicles Presents general information on atmospheric pollution and its regulation in Europe then discusses its impact on health and the environment the chemistry and mechanisms of automobile pollution the influence of fuel properties post combustion treatments and economic challenges to alleviating the problem Translated and enlarged from *Automobile et pollution* published by Editions Technip in Paris in 1992 Annotation copyrighted by Book News Inc Portland OR

Polynuclear Aromatic Hydrocarbons Marcus Cooke, Anthony J. Dennis, 1985 Symposium with over one hundred presentations was highlighted by overviews of the complex nature of PAH and their interaction with the environment and the human population that must live within it New approaches and techniques for measuring PAH were discussed as were the fate of these compounds in the environment Papers were presented defining the altered biological responses that were induced by PAH species In some cases the newly defined substituted PAH had greater effects than the parent compound Several reports concentrated on the synthesis of derivative PAH species and the actual formation processes that occur in the combustion of fossil fuels
