Verma, 2012-11-17 The rapid expansion of research activity in all disciplines of science and technology and the concomitant growth in the number of scientific publications have caused a considerable strain on library budgets Even well endowed libraries find it too expensive to collect all scientific journals Research workers therefore often find it difficult to discover the extent and nature of work done on a particular molecule Moreover literature searches even in a well equipped library take a great deal of time and effort In recent years the need for a comprehensive bibliography of the spectroscopy of poly atomic organic molecules particularly the derivatives of benzene naphthalene and diazine has been keenly felt This volume has therefore been prepared to provide easy access to information on infrared Raman absorption emission fluorescence and phosphorescence spectroscopy and also related calculations It covers about 900 organic ring compounds These compounds are arranged in alphabetic order references are given in chronological sequence for each molecule each characterized as to the technique and conditions covered Thus much library time may be saved and in particular even researchers who do not have convenient access to a really good library will be able to locate pertinent references in a matter of seconds 7 Vibrational Analysis C R Acad Sci      **Spectroscopic References to Polyatomic Molecules** N. **Micro-Spectroscopy** Max Diem, 2015-06-30 Modern Vibrational Spectroscopy and Micro Spectroscopy Theory Instrumentation and Biomedical Applications unites the theory and background of conventional vibrational spectroscopy with the principles of microspectroscopy It starts with basic theory as it applies to small molecules and then expands it to include the large biomolecules which are the main topic of the book with an emphasis on practical experiments results analysis and medical and diagnostic applications This book is unique in that it addresses both the parent spectroscopy and the microspectroscopic aspects in one volume Part I covers the basic theory principles and instrumentation of classical vibrational infrared and Raman spectroscopy It is aimed at researchers with a background in chemistry and physics and is presented at the level suitable for first year graduate students The latter half of Part I is devoted to more novel subjects in vibrational spectroscopy such as resonance and non linear Raman effects vibrational optical activity time resolved spectroscopy and computational methods Thus Part 1 represents a short course into modern vibrational spectroscopy Part II is devoted in its entirety to applications of vibrational spectroscopic techniques to biophysical and bio structural research and the more recent extension of vibrational spectroscopy to microscopic data acquisition Vibrational microscopy or microspectroscopy has opened entirely new avenues toward applications in the biomedical sciences and has created new research fields collectively referred to as Spectral Cytopathology SCP and Spectral Histopathology SHP In order to fully exploit the information contained in the micro spectral datasets methods of multivariate analysis need to be employed These methods along with representative results of both SCP and SHP are presented and discussed in detail in Part II
