Spectroscopy Of Light And Heavy Quarks:

Spectroscopy of Light and Heavy Quarks Ugo Gastaldi, Robert Klapisch, F.E. Close, 2012-12-06 The second course of the International School on Physics with Low Energy Antiprotons was held in Erice Sicily at the Ettore Majorana Centre for Scientific Culture from May 20 to May 31 1987 The School is dedicated to physics accessible to experiments using low energy antiprotons especially in view of operation of the LEAR facility at CERN with the upgraded antiproton source AAC Antiproton Accumulator AA and Antiproton Collector ACOL The first course in 1986 covered topics related to fundamental symmetries This book contains the proceedings of the second course which focused on spectroscopy of light and heavy quarks These proceedings contain both the tutorial lectures and contributions presented by participants during the School The papers are organized in four sections The first section includes theoretical reviews Section II contains experimental reviews and covers the results in meson spectroscopy from DM2 MARK III GAMS and n WA76 Section III presents the new meson spectroscopy experiments in preparation at CERN and Fermilab Crystal Barrel OBELIX Jetset and E760 Section IV is dedicated to LEAR and to future facilities where meson spectroscopy would be a principal component of the physics programme We should like to thank Dr Alberto Gabriele and the staff of the Ettore Majorana Centre who provided for a smooth running of the School and a very pleasant stay We are particularly grateful to Mrs Anne Marie Bugge for her crucial help during the preparation and running of the School and for the editing of these Proceedings

Quark Confinement and the Hadron Spectrum V N. Brambilla, Giovanni M. Prosperi, 2003 This book provides an update on our understanding of strong interaction with theoretical and experimental highlights included It is divided into five sections The first section is devoted to the investigations into and the latest results on the mechanism of quark confinement The second and third sections focus respectively on light and heavy quarks effective field theories Schwinger Dyson approach and lattice QCD results The fourth section deals with the deconfinement mechanism and quark gluon plasma formation signals The last section presents highlights of experiments new physics beyond QCD and nonperturbative approaches in other theories strings and SUSY that may be useful in QCD

Quark Confinement And The Hadron Spectrum Iii, Jun 98, Usa Nathan Isgur, 2000-06-27 The confinement mechanism of the quarks in QCD is one of the most challenging and open

problems in physics Confinement is a nonperturbative phenomenon and a definite way to handle it has not yet been found in field theory There are lattice calculations that can produce the low lying states of the spectrum and measure many important physical quantities but nevertheless the development of analytical techniques is of extreme importance for understanding the physics involved in confinement In this respect it is important to test the results obtained directly from the theory Bethe Salpeter kernel effective Hamiltonians quark potential etc on the spectrum form factors and decays of bound states of quarks and gluons and to relate them to the results of lattice theory In this book the question of the confinement mechanism is addressed explanations in terms of monopoles instantons and dyons are reviewed and the connection with duality is discussed

Quark Confinement And The Hadron Spectrum - Proceedings Of The International Conference Nora Serafina Brambilla,Giovanni Maria Prosperi,1995-03-29 The 20 year old problem of the confinement and the resulting spectrum of the bound states is central to quantum chromodynamics QCD Many approaches have been tried starting from different points of view the potential theory the Bethe Salpeter equation string and flux tube models bag models vacuum structure current algebra lattice theory and numerical simulations Phenomenological assumptions and first principle theoretical results or indications have been combined Many partial successes have been attained but a unified and comprehensive treatment is still lacking In recent years new attention has been given to the problem both in terms of theoretical developments and for the purpose of evaluating the spectrum and other properties of the particles In particular attention has been focussed on areas like numerical simulations the derivation of the potential the use of the Bethe Salpeter equation the connection between the potential and the chiral symmetry approach This workshop was an opportunity for a synthesis and a comparison of the different points of view

Hadron Spectroscopy Alberto Reis,2006-02-21 The purpose of Hadron 05 was to discuss recent developments in hadron spectroscopy New hadrons have been discovered in the past few years These states do not quite fit into the traditional quark model classification scheme of hadrons There has also been a remarkable improvement in the understanding of heavy quark bound systems or heavy quarkonia as well as the so called scalar mesons Topics covered include baryons exotics and hadron

Watson, Theo M. Grant, 2009 A quark is a type of elementary particle found in protons and neutrons and other subatomic particles They are a major constituent of matter along with leptons In nature quarks are never found on their own as isolated single particles rather they are bound together in composite particles named hadrons For this reason much of what is known about quarks has been inferred from observations on the hadrons themselves This book provides leading edge research on this field from around the globe Report of the Council for the Year ...
