Spectrum And Network Measurements:

Spectrum and Network Measurements Robert A. Witte, 2001 This book covers the theory and practice of spectrum and network measurements in electronic systems Areas covered include decibels Fourier analysis FFT and swept analyzers modulated signals signal distortion noise pulsed waveforms averaging and filtering transmission lines and measurement connection techniques two port network theory network analyzers and instrument performance and specifications Noble Publishing has reprinted the 1993 volume from Prentice Hall as a classic in the field Witte works for Agilent Rechnologies c Book News Inc *Electrical Spectrum and Network Analyzers* Albert D. Helfrick, 2012-12-02 This book presents fundamentals and the latest techniques of electrical spectrum analysis It focuses on instruments and techniques used on spectrum and network analysis rather than theory The book covers the use of spectrum analyzers tracking generators and network analyzers Filled with practical examples the book presents techniques that are widely used in signal processing and communications applications yet are difficult to find in most literature Presents numerous practical examples including actual spectrum analyzer circuits Instruction on how to use spectrum analyzers tracking generators and network analyzers End of chapter questions which make the book suitable as a college level text earthquakes **Evaluation of Hash Functions for Multipoint Sampling in IP Networks** Christian Henke, 2012-03-02 Diploma Thesis from the year 2008 in the subject Computer Science Applied grade 1 Technical University of Berlin language English abstract Network Measurements play an essential role in operating and developing today s Internet A variety of measurement applications demand for multipoint network measurements e g service providers need to validate their delay guarantees from Service Level Agreements and network engineers have incentives to track where packets are changed reordered lost or delayed Multipoint measurements create an immense amount of measurement data which demands for high resource measurement infrastructure Data selection techniques like sampling and filtering provide efficient solutions for reducing resource consumption while still maintaining sufficient information about the metrics of interest But not all selection techniques are suitable for multipoint measurements only deterministic filtering allows a synchronized selection of packets at multiple observation points Nevertheless a filter bases its selection decision on the packet content and hence is suspect to bias i e the selected subset is not representative for the whole population Hash based selection is a filtering method that tries to emulate random selection in order to obtain a representative sample for accurate estimations of traffic characteristics The subject of the thesis is to assess which hash function and which packet content should be used for hash based selection to obtain a seemingly random and unbiased selection of packets This thesis empirically analyzes 25 hash functions and different packet content combinations on their suitability for hash based selection Experiments are based on a collection of 7 real traffic groups from different networks **McGraw-Hill Encyclopedia of Science & Technology: Sor-sup**, 2002 This resource provides in depth coverage of major scientific and technological developments It offers illustrated detailed coverage of the
