Esposito,Gennaro Cordasco,Thomas Drugman,Jordi Solé-Casals,Francesco Carlo Morabito,2016-01-22 This book presents recent advances in nonlinear speech processing beyond nonlinear techniques It shows that it exploits heuristic and psychological models of human interaction in order to succeed in the implementations of socially believable VUIs and applications for human health and psychological support The book takes into account the multifunctional role of speech and what is outside of the box see Bj rn Schuller s foreword To this aim the book is organized in 6 sections each collecting a small number of short chapters reporting advances inside and outside themes related to nonlinear speech research The themes emphasize theoretical and practical issues for modelling socially believable speech interfaces ranging from efforts to capture the nature of sound changes in linguistic contexts and the timing nature of speech labors to identify and detect speech features that help in the diagnosis of psychological and neuronal disease attempts to improve the effectiveness and performance of Voice User Interfaces new front end algorithms
