The Design of Building Structures

Wolfgang Schueller,1996 Rather than relying on separate literature in the fields of structural engineering architecture construction and history this text presents the field of structures holistically in terms of building and architecture Buildings are studied from all points of view geometrical aesthetic historical functional environmental and construction providing the broadest treatment of structures available Descriptive analytical and graphical treatment of topics are presented with nearly equal emphasis Numerous case studies throughout exemplify structural concepts and develop a feeling for structure and form instead of supporting specific architectural styles or structural acrobatics Teaching in the context of building structure and form i e low rise high rise long span etc allows students to understand structures on real not abstract mathematical terms

Structural systems i e frames arches space frames soft shells etc and how they aid in making space and enhancing the formal presentation of a structure are discussed in detail Chapter 3 deals with approximate design methods for steel wood reinforced concrete and prestressed concrete according to the **The Publishers' Trade List Annual** ,1979 *The British National Bibliography* Arthur James Wells,2009 *Natural Hazard Phenomena and Mitigation* ,1995 **Books on Engineering** Science Museum (Great Britain).
