## **Species Problem The:**

**The Species Problem** David N. Stamos, 2003-03-17 In this provocative work David N Stamos tackles the problem of determining exactly what a biological species is in short whether species are real and the nature of their reality. Although many have written on this topic The Species Problem is the only comprehensive single authored book on this central concern of biology. Stamos critically considers the evolution of the three major contemporary views of species: species nominalism, species as classes and species as individuals. Finally he develops his own solution to the species problem a solution aimed at providing a universal species concept worthy of the Modern Synthesis. This book will be of interest to philosophers of biology and of science in general to historians of biology and to biologists concerned with one of the most significant and practical conceptual issues in their field.

**The Species Problem** Igor Ya. Pavlinov, 2023-02-24 The general notion of species is one of the most fundamental in biology. But an idea of species is also one of the most persistent unresolved obsessions of biologists, philosophers and theoreticians. This new book investigates the multifaceted problem species as a conceptual envelope of that notion. Contemporary conceptualists and evolutionary epistemology allow for a fresh look by analyzing the framework of history viewed as changes ordered by changing philosophical scientific contexts. In this analysis the species problem is characterized in a pluralistic non-trivial manner in contrast to a more monistic accepted view. Key Features: Provides new insights into the persistent species problem. Focuses on conceptual history and identifies pivotal landmarks in the history of the concept of species. Argues for a scientific consistency of species pluralism. Discusses the evolving species hood in the context of new essentialism. **The Species Problem** Igor Pavlinov, 2013-02-06 The book includes a collection of theoretical papers dealing with the species problem which is among most fundamental issues in biology. The principal topics are consideration of the species problem from the standpoint of modern non-classical science paradigm with emphasis on its conceptual status presuming its analysis within certain conceptual framework: evolutionary emergence of the species as discrete unit of certain level of generality; epistemological consideration of the species as a particular explanatory hypotheses with respective revised concepts of biodiversity and conservation; considerations of evolutionary and phylogenomic species concepts as candidates for the universal one; re-appraisal of the biological species concept based on the friend/foe recognition system; species delimitation approach using multi-locus coalescent based method; a re-consideration of the Darwin's species concept.

**the Life Sciences** Alessandro Minelli,2021-02-24 Recent and ongoing debates in biology and the philosophy of biology reveal a widespread dissatisfaction with traditional explanatory frameworks There are also problems with the current definitions or circumscriptions of key concepts such as gene species and homology and even of whole disciplinary fields within the life sciences e g developmental biology These contrasting views are arguably a symptom of the need to revisit traditional unchallenged partitions between the specialist disciplines within the life sciences In the diversity of topics addressed and approaches to move beyond the current disciplinary organization the five essays in this volume will hopefully stimulate further exploration towards an improved articulation of life sciences

Olivier Rieppel, Rowe Family Curator of Evolutionary Biology, Negaunee Integrative Research Center, Field Museum USA. Species or the Species Problem is a topic in science in the philosophy of science and in general philosophy. In fact it encompasses many aspects of the same problem and these are dealt with in this volume. Species are often thought of as fundamental units of biological matter to be used in ecology, conservation, classification and biodiversity. The chapters in this book present opposing views on the current philosophical and conceptual issues of the Species Problem in biology. Divided into four sections Concepts and Theories, Practice and Methods, Ranks and Trees and Names and Metaphysics and Epistemologies, the book is authored by biologists, philosophers and historians, many leaders in their fields. Topics include ontology of species, definitions of both species category and units, species rank, speciation issues, nomenclature, ecology and species conservation. *Species Problems and Beyond* aims to clarify the contemporary issues of the Species Problem. It is ideal for use in upper level seminars and courses in Evolutionary Biology, Philosophy of Science, Philosophy of Biology, Systematics and Taxonomy and Phylogenetics, Cladistics and for any scholar in these fields.
