## **Spectral Elements For Transportdominated Equations:**

**Spectral Elements for Transport-Dominated Equations** Daniele Funaro, In the last few years there has been a growing interest in the development of numerical techniques appropriate for the approximation of differential model problems presenting multiscale solutions This is the case for instance with functions displaying a smooth behavior except in certain regions where sudden and sharp variations are localized Typical examples are internal or boundary layers When the number of degrees of freedom in the discretization process is not sufficient to ensure a fine resolution of the layers some stabilization procedures are needed to avoid unpleasant oscillatory effects without adding too much artificial viscosity to the scheme In the field of finite elements the streamline diffusion method the Galerkin least squares method the bubble function approach and other recent similar techniques provide excellent treatments of transport equations of elliptic type with small diffusive terms referred to in fluid dynamics as advection diffusion or convection diffusion equations Goals This book is an attempt to guide the reader in the construction of a computational code based on the spectral collocation method using algebraic polynomials The main topic is the approximation of elliptic type boundary value partial differential equations in 2D with special attention to transport diffusion equations where the second order diffusive terms are strongly dominated by the first order advective terms Applications will be considered especially in the case where nonlinear systems of partial differential equations can be reduced to a sequence of transport diffusion equations [Spectral/hp Element Methods for Computational Fluid Dynamics](#) George Karniadakis, Spencer Sherwin, 2013-01-10 Completely revised and expanded new edition covering the recent and significant progress in multi domain spectral methods at both the fundamental and application level Written by leading experts it is a must have for students academics and practitioners in computational fluid mechanics and related fields [Chebyshev and Fourier Spectral Methods](#) John P. Boyd, 2001-12-03 Completely revised text focuses on use of spectral methods to solve boundary value eigenvalue and time dependent problems but also covers Hermite Laguerre rational Chebyshev sinc and spherical harmonic functions as well as cardinal functions linear eigenvalue problems matrix solving methods coordinate transformations methods for unbounded intervals spherical and cylindrical geometry and much more 7 Appendices Glossary Bibliography Index Over 160 text figures [Spectral Methods in MATLAB](#) Lloyd N. Trefethen, 2000-01-01 This is the only book on spectral methods built around MATLAB programs Along with finite differences and finite elements spectral methods are one of the three main technologies for solving partial differential equations on computers Since spectral methods involve significant linear algebra and graphics they are very suitable for the high level programming of MATLAB This hands on introduction is built around forty short and powerful MATLAB programs which the reader can download from the World Wide Web [Journal of the Society for Industrial and Applied Mathematics.
