The Architecture Of Molecules:

The Architecture of Molecules (By> Linus Pauling and Roger Hayward Linus Pauling,Roger Hayward (Illus),1964 **The Architecture of Molecules** Linus Pauling,Roger Hayward,1964 An introduction to the subject of how atoms are arranged and interconnected in molecules and crystals and to the way in which the geometry of this organization accounts for some of the properties of substances The Author and Roger Hayward the illustrator emphasize the significance of molecular structure to life *Molecular Modeling for the Design of Novel Performance Chemicals and Materials* Beena Rai,2012-03-23

Molecular modeling MM tools offer significant benefits in the design of industrial chemical plants and material processing operations While the role of MM in biological fields is well established in most cases MM works as an accessory in novel products materials development rather than a tool for direct innovation As a result MM engineers and practitioners are often seized with the question How do I leverage these tools to develop novel materials or chemicals in my industry Molecular Modeling for the Design of Novel Performance Chemicals and Materials answers this important question via a simple and practical approach to the MM paradigm Using case studies it highlights the importance and usability of MM tools and techniques in various industrial applications The book presents detailed case studies demonstrating diverse applications such as mineral processing pharmaceuticals ceramics energy storage electronic materials paints coatings agrochemicals and personal care The book is divided into themed chapters covering a diverse range of industrial case studies from pharmaceuticals to cement While not going too in depth into fundamental aspects the book covers almost all paradigms of MM and references are provided for further learning The text includes more than 100 color illustrations of molecular models

Molecular Diversity in Drug Design P.M. Dean,R.A. Lewis,2007-05-08 High throughput screening and combinatorial chemistry are two of the most potent weapons ever to have been used in the discovery of new drugs At a stroke it seems to be possible to synthesise more molecules in a month than have previously been made in the whole of the distinguished history of organic chemistry Furthermore all the molecules can be screened in the same short period However like any weapons of immense power these techniques must be used with care to achieve maximum impact The costs of implementing and running high throughput screening and combinatorial chemistry are high as large dedicated facilities must be built and staffed In addition the sheer number of chemical leads generated may overwhelm the lead optimisation teams in a hail of friendly fire Mother nature has not entirely surrendered as the number of building blocks that could be used to build libraries would require more atoms than there are in the universe In addition the progress made by the Human Genome Project has uncovered many proteins with different functions but related binding sites creating issues of selectivity Advances in the new field of pharmacogenomics will produce more of these challenges There is a real need to make hi throughput screening and combinatorial chemistry into smart weapons so that their power is not dissipated That is the challenge for modellers computational chemists cheminformaticians and IT experts In this book we have broken down this grand challenge into key
