The California Nitrogen Assessment Thomas P. Tomich, 2016-06-14 Nitrogen is indispensable to all life on Earth. However, humans now dominate the nitrogen cycle and nitrogen emissions from human activity have real costs: water and air pollution, climate change, and detrimental effects on human health, biodiversity, and natural habitats. Too little nitrogen limits ecosystem processes, while too much nitrogen transforms ecosystems profoundly. The California Nitrogen Assessment is the first comprehensive account of nitrogen flows, practices, and policies for California, encompassing all nitrogen flows, not just those associated with agriculture and their impacts on ecosystem services and human wellbeing. How California handles nitrogen issues will be of interest nationally and internationally, and the goal of the assessment is to link science with action and to produce information that affects both future policy and solutions for addressing nitrogen pollution. This book also provides a model for application of integrated ecosystem assessment methods at regional and state/subnational levels.

Aspects of the Theory of Tariffs (Collected Works of Harry Johnson) Harry Johnson, 2013-07-18 An internationally acknowledged authority on all aspects of the theory of international trade and payments, this book collects Harry Johnson's contributions to the study of international trade, including a critique of the theory of effective protection. The book discusses the integration of income distribution and other aspects of the economy into the positive theory of tariffs; the issues raised by the use of tariffs to promote economic development; the implications of distortions of various kinds in the working of competition for tariff theory and policy; the costs of protection; the implications of effective protection for world economic development; and the economic effects of trade preferences. The question of free trade and the extent to which it requires the harmonization of other aspects of economic policy.
