The Chinese Economy ,2006 *The Chinese Economy in the 21st Century* Barbara Krug,Hans J. Hendrischke,2007-01-01 The authors discuss the role of local institutions in coordinating business activities and unleashing entrepreneurship arguing that the sudden growth of new firms and industries is facilitated by changes in business behaviour and institutions Initial private exchange and investment in an environment of ill functioning markets are shown to depend on local networks and local business culture which in turn rely on local tax regimes setting incentives for inherited bureaucracies to engage in economic transformation Finally the book establishes local institutions and local governance as crucial dimensions of China s emerging business system

China's

Economy Into the New Century John Wong, Ding Lu, 2002 In the last two decades of the 20th century China stood out as the world's star performer in economic growth thanks to the market oriented reform that started in 1978 At the turn of the century the Chinese economy faces a series of challenges to sustain its growth and stability The two decade long rapid growth has effectively strengthened China's economic power and raised its people's standard of living It has also transformed China from a centrally planned command economy into a socialist market economy which operates increasingly in line with capitalist norms Major structural problems however remain and are growing acute Weakness in the fiscal system breeds rent seeking at the local level and causes tension in the state budget The flawed financial institutions and the biased ownership structure continue to distort resource allocation and cause huge efficiency losses Inter provincial and inter regional disparity is reaching a level that threatens national unity and social stability As China joins the World Trade Organization and becomes more integrated into the world economy it urgently needs to improve the domestic business environment and to beef up indigenous industries for foreign competition This volume is a collection of papers written by scholars at the East Asian Institute to address those problems during the period 1999-2001 The authors with their knowledge and experience in China studies provide in depth observations and professional analyses of some of the most important issues for the Chinese economy at the turn of the century Some of the observations and analyses lead to enlightening policy recommendations The solid scholarship combined with the policy orientation of these papers will appeal greatly to researchers in academia governments and other institutions The policy oriented and fact based analyses will also be of interest to practitioners in business including business consultants

The Chinese Economy Gregory C. Chow, 1987 The main purpose of this book is to apply the basic tools of economic analysis to the economy of the Peoples Republic of China It is written for students of economics who would like to understand China for students of China who would like to understand economics and for professional economists and lay readers who would like to understand the Chinese economy The study of the Chinese economy is interesting to economists for several reasons First China has a different cultural background and a different set of social and political institutions from the Western countries in which most of the tools of economic analysis have been developed It is therefore interesting to see how these tools can be applied to China and how they ought to be further developed or modified in the Chinese context Second many drastic changes in economic policy and economic institutions have taken place since the founding of the People's Republic of China Such important experiments in economics provide rare opportunities to study their results Third since the later 1970s much more information on the Chinese economy has become available It is time for us to digest to scrutinize and possibly to help improve the economic data on China
