Jameson, 2011-10-10 Since the publication of the first edition of Chemistry of Protein Conjugation and Cross Linking in 1991 new cross linking reagents notably multifunctional cross linkers have been developed and synthesized The completion of the human genome project has opened a new area for studying nucleic acid and protein interactions using nucleic acid cross linking reagents and advances have also been made in the area of biosensors and microarray biochips for the detection and analysis of genes proteins and carbohydrates In addition developments in physical techniques with unprecedented sensitivity and resolution have facilitated the analysis of cross linked products Updated to reflect the advances of the 21st century this book offers An overview of the chemical principles underlying the processes of cross linking and conjugation A thorough list of cross linking reagents published in the literature since the first edition covering monofunctional homobifunctional heterobifunctional multifunctional and zero length cross linkers Reviews of the use of these reagents in studying protein tertiary structures geometric arrangements of subunits within complex proteins and nucleic acids near neighbor analysis protein to protein or ligand receptor interactions and conformational changes of biomolecules Discusses the application of immunoconjugation for immunoassays immunotoxins for targeted therapy microarray technology for analysis of various biomolecules and solid state chemistry for immobilizations

### **Non-covalent Interactions In Proteins (Second Edition)**

Andrey Karshikoff, 2021-11-08 Although textbooks on the physics of condensed matter consider non covalent interactions in detail their application for analysis of protein properties is often poorly presented or omitted On the other hand books on biochemistry molecular modeling or molecular simulation introduce these interactions in the context of the corresponding topic which sometimes results in superficial explanations of their nature This book succeeds in uniting comprehensive considerations of non covalent interactions with the specificity of their application in protein sciences This second edition includes new chapters on intrinsically disordered proteins microcalorimetry of proteins cold denaturation thermodynamic stability and thermal adaptability of proteins The ideal aid for students of physics or chemistry with interests in biology and biophysics the book can also be useful for students of biology biochemistry or biomedicine who want to extend their knowledge of how protein properties are described at the molecular level
