The importance of cognitive practice effects in aging neuroscience William Kremen, Daniel Nation, Lars Nyberg, 2022-12-19      Applications of Methods of Evaluation Herbert H. Hyman, Charles R. Wright, Terence K. Hopkins, 2022-05-27 This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1962      **Laboratory Psychology** Julia Nunn, 1998 Experimental design is important enough to merit a book on its own without statistics that instead links methodology to a discussion of how psychologists can advance and reject theories about human behaviour The objective of this book is to fulfil this role The first four chapters lay the foundations of design in experimental psychology The first chapter justifies the prominent role given to methodology within the discipline whilst chapters two and three describe between subject and within subject designs Chapter four compares and contrasts the traditional experimental approach with that of the quasi experimental or correlational approach concluding that the consequences of not recognizing the value of the latter approach can be far reaching The following three chapters discuss practical issues involved in running experiments The first of these offers a comprehensive guide to the student researcher who wants to construct a good questionnaire including a discussion of reliability and validity issues The next chapter considers the basic tools of psychological research whilst both discussing the theoretical problem of how a sample from a population is chosen and offering useful hints on the practical issue of finding adequate populations from which to select participants The next chapter considers ethical practice within psychological research written in large part so that psychology students will be better able to anticipate ethical problems in their studies before they occur The final two chapters consider reporting and reading psychological papers Chapter eight details what should and should not be included in a laboratory report The contributors use their collective experience of marking numerous lab reports to highlight common errors and provide solutions Finally chapter nine describes the various elements of a journal article including tips on how to get the best out of your journal reading      An Evaluation of the Effectiveness of a Self-tutoring Approach Applied to Pilot Training Richard S. Hatch, 1959      Sixth International Conference on Cognitive Modeling - ICCM - 2004 Marsha Lovett, 2004-08 The International Conference on Cognitive Modeling brings together researchers who develop computational models that explain and predict cognitive data The 2004 conference encompassed an integration of diverse data through models of coherent phenomena      **Briggs' Information Processing Model of the Binary Classification Task** S. Mudd, 2019-01-22 First published in 1983 Routledge is an imprint of Taylor Francis an informa company This monograph is a review of the evolution of George Briggs information processing model from a general schema beginning with the work of Saul Sternberg 1969a and Edward E Smith 1968 to a fairly well detailed schematic

representation of central processes that Briggs was working on at the time of his early death The development of Briggs model of the binary classification task BCT spanned the period from 1969 when he published his first report on choice reaction time with Blaha Briggs Blaha 1969 to 1977 with the publication of a posthumous paper Briggs Thomason Hagman 1978 The model evolved across a total of 16 experimental and 2 review papers

**Context in Communication: A Cognitive View** Gabriella Airenti, Marco Cruciani, Alessio Plebe, 2017-04-03 Context is what contributes to interpret a communicative act beyond the spoken words It provides information essential to clarify the intentions of a speaker and thus to identify the actual meaning of an utterance A large amount of research in Pragmatics has shown how wide ranging and multifaceted this concept can be Context spans from the preceding words in a conversation to the general knowledge that the interlocutors supposedly share from the perceived environment to features and traits that the participants in a dialogue attribute to each other This last category is also very broad since it includes mental and emotional states together with culturally constructed knowledge such as the reciprocal identification of social roles and positions The assumption of a cognitive point of view brings to the foreground a number of new questions regarding how information about the context is organized in the mind and how this kind of knowledge is used in specific communicative situations A related very important question concerns the role played in this process by theory of mind abilities ToM both in typical and atypical populations In this Research Topic we bring together articles that address different aspects of context analysis from theoretical and empirical perspectives integrating knowledge and methods derived from Philosophy of language Linguistics Cognitive Science Cognitive Neuroscience Developmental and Clinical Psychology

**Practitioner's Guide to Evaluating Change with Intellectual Assessment Instruments** Robert J. McCaffrey, Holly James Westervelt, 2013-03-14 While conducting research on intellectual and neuropsychological performance of various patient populations across time we became aware of the lack of information concerning practice effects associated with many widely used assessment instruments Although test retest data were available for almost all of these instruments it typically came in the form of correlation coefficients and mean changes in performance between assessments was often absent In a 1995 article McCaffrey Westervelt 1995 we discussed a number of issues relevant to serial neuropsychological and intellectual assessment and concluded that clinical neuropsychological practitioners had few guidelines to assist them in interpreting change in a patient's performance across assessments This volume represents our efforts at reviewing the literature between 1970 and 1998 and extracting the reported information on practice effects The tables include the assessment instrument used information on the subject patient groups the sample size the gender age intervention interval between the assessments scores at both assessment points and the citation The tables reflect the existing published literature within intellectual assessment and therefore some instruments e.g. Wechsler tests comprise a majority of the tables whereas others e.g. Raven's Progressive Matrices Stanford Binet do not The test index is arranged by the name of the test as reported in the specific article We caution readers to refer
