## **The Predators And Their Prey:**

Wolves, Bears, and Their Prey in Alaska National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Management of Wolf and Bear Populations in Alaska, 1997-10-27 This book assesses Alaskan wolf and bear management programs from scientific and economic perspectives. Relevant factors that should be taken into account when evaluating the utility of such programs are identified. The assessment includes a review of current scientific knowledge about the dynamics and management of large mammalian predator-prey relationships and human harvest of wildlife in northern ecosystems and an evaluation of the extent to which existing research and management data allow prediction of the outcome of wolf management or control programs and grizzly bear management programs. Included is an evaluation of available economic studies and methodologies for estimating the costs and benefits of predator control programs in Alaska.

*Elephants and Savanna Woodland Ecosystems* Christina Skarpe, Johan T. du Toit, Stein R. Moe, 2014-04-02 During the nineteenth century ivory hunting caused a substantial decrease of elephant numbers in southern Africa. Soon after that, populations of many other large and medium sized herbivores went into steep decline due to the rinderpest pandemic in the 1890s. These two events provided an opportunity for woodland establishment in areas previously intensively utilized by elephants and other herbivores. The return of elephants to currently protected areas of their former range has greatly influenced vegetation locally and the resulting potential negative effects on biodiversity are causing concern among stakeholders, managers and scientists. This book focuses on the ecological effects of the increasing elephant population in northern Botswana, presenting the importance of the elephants for the heterogeneity of the system and showing that elephant ecology involves much wider spatiotemporal scales than was previously thought. Drawing on the results of their research, the authors discuss elephant caused effects on vegetation in nutrient rich and nutrient poor savannas and the potential competition between elephants on the one hand and browsers and mixed feeders on the other. Ultimately, this text provides a comprehensive review of ecological processes in African savannas, covering long term ecosystem changes and human-wildlife conflicts. It summarises new knowledge on the ecology of the sub-humid African savanna ecosystems to advance the general functional understanding of savanna ecosystems across moisture and nutrient gradients.

**Population Systems** Alan A. Berryman, Pavel Kindlmann, 2008-03-19 I had taught courses in applied ecology, population dynamics and population management for many years and like many of my colleagues had grown accustomed to the blank stares of my students as we wove our way through the confused semantics and intricate concepts of traditional ecology and wrestled with elaborate mathematical arguments. I searched in vain for a central unifying concept on which to organize a theory of population ecology until 30 years ago. I read a small book of essays edited by John Milsum of McGill University entitled Positive Feedback: A General Systems Approach to Positive, Negative Feedback and Mutual Causality. Stimulated by the articles in this book, particularly those written by Milsum, M. Maruyama and A. Rapoport, I began to structure my lectures.

around the central ideas of general systems theory I first used this approach in my graduate courses in population dynamics and population management and then encouraged by the results in my undergraduate course in forest entomology and to teach population dynamics to practicing foresters Almost without exception my students found the general systems approach intuitively reasonable and easier to understand than traditional teaching methods Even undergraduates seem to grasp the fundamental principles quite rapidly and more important to realize that a general understanding of population systems is an essential part of their education These reactions by my students and their continued encouragement led me to write this book

**Introduction to Animal Behavior**

Roland J. Siiter,1999 With more emphasis than usual on the behavior of vertebrates and primates although the author still includes classic bird and insect studies the book examines how wild animals live survive and reproduce in their natural wild habitats

This unique approach is presented in a straightforward manner without jargon ensuring that students find the text informative and entertaining Well placed examples and explanations provide students with further opportunity to understand the application of the concepts Social Predation Guy Beauchamp,2013-12-07 The classic literature on predation dealt almost exclusively with solitary predators and their prey Going back to Lotka Volterra and optimal foraging theory the theory about predation including predator prey population dynamics was developed for solitary species Various consequences of sociality for predators have been considered only recently Similarly while it was long recognized that prey species can benefit from living in groups research on the adaptive value of sociality for prey species mostly emerged in the 1970s The main theme of this book is the various ways that predators and prey may benefit from living in groups The first part focusses on predators and explores how group membership influences predation success rate from searching to subduing prey The second part focusses on how prey in groups can detect and escape predators The final section explores group size and composition and how individuals respond over evolutionary times to the challenges posed by chasing or being chased by animals in groups This book will help the reader understand current issues in social predation theory and provide a synthesis of the literature across a broad range of animal taxa Includes the whole taxonomical range rather than limiting it to a select few Features in depth analysis that allows a better understanding of many subtleties surrounding the issues related to social predation Presents both models and empirical results while covering the extensive predator and prey literature Contains extensive illustrations and separate boxes that cover more technical features i e to present models and review results

*Aquatic Predators and their Prey* Simon Greenstreet,Mark Tasker,1996-04-18 In three major sections Aquatic Predators and Their Prey examines the behaviour ecology and management of predators and their prey in both seawater and fresh water paying particular attention to the main predators seals cetaceans birds fish and man The text details not only the methods employed by predators to capture their prey but also the strategies they have developed to evade capture Additionally examined are the role of predators in governing the population dynamics of prey species and in determining the structure of ecosystems Finally the impact of man both as harvester and manager of aquatic ecosystems is also evaluated in considerable detail Brings together the management of aquatic ecosystems with various aspects of predator prey interactions Promotes greater understanding of the role of predator prey interactions in the function of aquatic ecosystems Will aid the development of whole system management protocols Birds of Prey and Red Grouse Steve M. Redpath,Simon J. Thirgood,1997 The relationship between birds of prey and red grouse the former of conservaton interest and the latter of economic importance is central to the management of many upland estates This text describes the results of a study which examined the impact of raptor predation on red grouse numbers The study was based at Langholm south west Scotland but was extended in part to five other moors elsewhere in Scotland **The Journal of Cetacean Research and Management**,2001 Automated Design and Optimization of Wire Antennas Using Genetic Algorithms Derek Scott Linden,1997 A

Genetic Algorithm GA has been used in conjunction with the Numerical Electromagnetics Code Version 2 NEC2 to create and optimize atypical wire antenna designs with impressive characteristics. Antenna design parameters are encoded into an ordered series of numbers and/or symbols analogous to a biological chromosome. A cost function that quantifies how well a design meets the engineer's specifications is created. The GA uses these to generate and evaluate a population of designs. The most successful designs are then promoted and mixed through mating and mutation while poor designs are removed. This process, difficult to trap in local minima, continues until convergence criteria are met, generally yielding excellent designs with no user intervention or initial guesses. Three antennas have been optimized: a monopole loaded with a modified folded dipole, the Yagi antenna, and the crooked wire genetic antenna. Prior study of the loaded monopole had shown hemispherical coverage was possible. The GA found an asymmetric loaded monopole with an average variation in gain over the hemisphere of only 0.4 dB, confirmed by measurement. GA optimized Yagi antennas surpassed the gain of conventional Yagis by about 1 dB, improvement also confirmed by measurement. The GA designed a Yagi with a beamwidth of 50 deg, 60 deg sidelobes, nearly 25 dB down, and a 14% bandwidth, specifications difficult to achieve using conventional techniques. The crooked wire genetic antenna is several wires joined in series; locations and lengths are determined by the GA. Optimization for hemispherical coverage with right-hand circular polarization (RHCP) produced highly unusual shapes unrealizable using a conventional approach. RHCP hemispherical coverage was achieved with less than 4 dB variation. Measurements verify the results.

It examines the form and function of forest ecosystems and how they change over time in response to natural and human-caused disturbances. A complete treatment of the ecosystem including all the major structural components and functional processes of the forest ecosystem. This book examines forest ecology in the context of sustainable development and population growth. Gives equal emphasis to ecosystem function, the physical environment, the biotic processes, population and community ecology, and ecosystem change over time.    *Predator Vs Prey: How Eagles and Other Birds Attack!* Tim Harris, 2021-06-08. Each spread has dramatic photographs and looks in detail at one bird and focuses on its primary weapon such as talons, hearing, or ambush.
