**The Principles of Experimental Research** K Srinagesh, 2011-04-01 The need to understand how to design and set up an investigative experiment is nearly universal to all students in engineering applied technology and science as well as many of the social sciences Many schools offer courses in this fundamental skill and this book is meant to offer an easily accessible introduction to the essential tools needed including an understanding of logical processes how to use measurement the do s and don ts of designing experiments so as to achieve reproducible results and the basic mathematical underpinnings of how data should be analyzed and interpreted The subject is also taught as part of courses on Engineering statistics Quality Control in Manufacturing and Senior Design Project in which conducting experimental research is usually integral to the project in question Covers such essential fundamentals as definitions quantification and standardization of test materials Shows students and professionals alike how to plan an experiment from how to frame a proper Hypothesis to designing an experiment to accurately reflect the nature of the problem to designing with factors Includes a separate section on the use of Statistics in Experimental Research including overview of probability and statistics as well as Randomization Replication and Sampling as well as proper ways to draw statistical inferences from experimental data *A Text Book of the Principles of*

*Physics* Alfred Daniell, 1894 **Visual Methodologies and Digital Tools for Researching with Young Children** Marilyn Fler, Avis Ridgway, 2013-11-11 This book makes an original contribution to researching child community development so that those with specific interests in early childhood education have new theoretical tools to guide their research practices The book explicitly theorises the use of digital visual tools from a cultural historical perspective It also draws upon a range of post structuralist concepts for moving research and scholarship forward Examples of visual technologies from research in different cultural communities are foregrounded In particular this book introduces contemporary methodologies for researching child and community development with a focus on visual methodology so the dynamics of development can be captured over time and analysed historically culturally socially ecologically and psychologically through a range of iterative techniques Visual technology was not freely available in Vygotsky s time for example and therefore potentially represents an extension of his genetic experimental approach to researching child development The book presents a range of methodological arguments about research into child and community development through which new conceptions for research centred on young children have been created The authors of the chapters also discuss why a more holistic dynamic and ethical view of research is needed for generating new knowledge about child development in a range of cultural contexts
