**The Characteristics of Parallel Algorithms** Leah H. Jamieson, Dennis Gannon, Robert J. Douglass, 1988 *The Characteristics of Parallel Algorithms* Leah H. Jamieson, Dennis B. Gannon, Robert J. Douglass, 1987 Mathematics of Computing Parallelism *Parallel Scientific Computing in C++ and MPI* George Em Karniadakis, Robert M. Kirby II, 2003-06-16 Numerical algorithms modern programming techniques and parallel computing are often taught serially across different courses and different textbooks The need to integrate concepts and tools usually comes only in employment or in research after the courses are concluded forcing the student to synthesise what is perceived to be three independent subfields into one This book provides a seamless approach to stimulate the student simultaneously through the eyes of multiple disciplines leading to enhanced understanding of scientific computing as a whole The book includes both basic as well as advanced topics and places equal emphasis on the discretization of partial differential equations and on solvers Some of the advanced topics include wavelets high order methods non symmetric systems and parallelization of sparse systems The material covered is suited to students from engineering computer science physics and mathematics **Combinatorial Scientific Computing** Uwe Naumann, Olaf Schenk, 2012-01-25 Combinatorial Scientific Computing explores the latest research on creating algorithms and software tools to solve key combinatorial problems on large scale high performance computing architectures It includes contributions from international researchers who are pioneers in designing software and applications for high performance computing systems *Parallel Scientific Computing in C++ and MPI* George Karniadakis, Robert M. Kirby, 2003-06-16 Accompanying CD ROM has a software suite containing all the functions and programs discussed **The Cumulative Book Index**, 1998 A world list of books in the English language *Scientific and Technical Aerospace Reports*, 1995 **Mathematics of Computation**, 1988 Original articles on all aspects of numerical mathematics book reviews mathematical tables and technical notes Covers advances in numerical analysis application of computer methods high speed calculating and other aids to computation **Parallelism in Matrix Computations** Efstratios Gallopoulos, Bernard Philippe, Ahmed H. Sameh, 2015-07-25 This book is primarily intended as a research monograph that could also be used in graduate courses for the design of parallel algorithms in matrix computations It assumes general but not extensive knowledge of numerical linear algebra parallel architectures and parallel programming paradigms The book consists of four parts I Basics II Dense and Special Matrix Computations III Sparse Matrix Computations and IV Matrix functions and characteristics Part I deals with parallel programming paradigms and fundamental kernels including reordering schemes for sparse matrices Part II is devoted to dense matrix computations such as parallel algorithms for solving linear systems linear least squares the symmetric algebraic eigenvalue problem and the singular value decomposition It also deals with the development of parallel algorithms for special linear systems such as banded Vandermonde Toeplitz and block Toeplitz systems Part III addresses sparse matrix computations and the development of

parallel iterative linear system solvers with emphasis on scalable preconditioners b parallel schemes for obtaining a few of the extreme eigenpairs or those contained in a given interval in the spectrum of a standard or generalized symmetric eigenvalue problem and c parallel methods for computing a few of the extreme singular triplets Part IV focuses on the development of parallel algorithms for matrix functions and special characteristics such as the matrix pseudospectrum and the determinant The book also reviews the theoretical and practical background necessary when designing these algorithms and includes an extensive bibliography that will be useful to researchers and students alike The book brings together many existing algorithms for the fundamental matrix computations that have a proven track record of efficient implementation in terms of data locality and data transfer on state of the art systems as well as several algorithms that are presented for the first time focusing on the opportunities for parallelism and algorithm robustness *SIAM Journal on Scientific Computing*, 2000 *Parallel Scientific Computing and Optimization* Raimondas Ciegis, David Henty, Bo Kågström, Julius Žilinskas, 2008-10-08 Parallel Scientific Computing and Optimization introduces new developments in the construction analysis and implementation of parallel computing algorithms This book presents 23 self contained chapters including survey chapters and surveys written by distinguished researchers in the field of parallel computing Each chapter is devoted to some aspects of the subject parallel algorithms for matrix computations parallel optimization management of parallel programming models and data with the largest focus on parallel scientific computing in industrial applications This volume is intended for scientists and graduate students specializing in computer science and applied mathematics who are engaged in parallel scientific computing *Subject Guide to Books in Print*, 1993 **New Parallel Algorithms for Direct Solution of Linear Equations** C. Siva Ram Murthy, K. N.
