Interface Between Innate And Acquired Immunity:

The Interface Between Innate and Acquired Immunity M.D. Cooper,H. Koprowski,2013-03-09 All multicellular organisms may possess innate immunity mediated by defense mechanisms with which the organism is born In recent years much has been learned about the diversity of innate immune mechanisms A large array of naturally produced antimicrobial peptides has been de fined A variety of cell surface receptors that recognize common patterns displayed by infectious organisms have been identified along with the intracellular pathways that these receptors use to activate cellular defense functions Cell surface receptors on natural killer NK cells have been shown to sense microbial invasion in neighboring cells thereby setting into motion their elimination by cy tototoxic mechanisms Other receptors have been found to facilitate phagocytosis and intracellular killing of microbes by phagocytic cells These and other natural defense mechanisms have traditionally been viewed as the first line of body defense in vertebrate species that also possess the capacity for acquired or adaptive immunity Sharks and all of the other jawed vertebrates generate large repertoires of T and B lymphocyte clones that display different antigen specific receptors in the form ofT cell receptors TCR and immunoglobulins Ig that allow them to recognize and respond to antigens in collaboration with antigen present ing cells Memory T and B cells are then generated to allow faster and heightened cellular and humoral immune re sponses on secondary antigen encounter In recent years it has also become obvious that innate immune responses can directly influence adaptive immune responses in ways that will enhance body defense

Danen, 2006-05-12 Cell adhesion is essential for the organization of multicellular organisms. Indeed various types of cell adhesion receptors including cadherins and integrins are present in animals ranging from nematodes

and insects to vertebrates In this book we focus on the integrin family which is shared among all metazoans but has expanded considerably with vertebrate evolution Since the cloning of the first integrin subunit some twenty years ago integrin biology has been and still is a topic of intense study Integrin mediated adhesion is a regulated process that in turn regulates the organization of the actin cytoskeleton Moreover it has become clear from in vitro analyses that integrin mediated adhesion can affect virtually all aspects of cellular behavior including polarity motility proliferation survival and differentiation This book aims to provide an extensive overview of the current knowledge about the regulation of developmental processes as well as the maintenance of proper tissue function by integrin mediated adhesion In addition key aspects of integrin cell biology are discussed Chapter 1 of this book is meant as an introduction in integrin biology and is followed by a more in depth discussion of the roles that integrins play in extracellular matrix assembly in cell migration and in the regulation of intracellular signaling cascades Chapters 2 4 Subsequently Chapters 5 and 6 discuss what has been learned about the role of integrins and associated proteins in animal development from genetic analysis of two invertebrates the flatworm *C. elegans* and the fruit fly *D. melanogaster* The relatively limited number of genes encoding adhesion related proteins and the relative ease and speed with which genetic experiments can be performed in these animals have allowed researchers to study the basic principles of integrin biology in vivo Finally Chapters 7 14 discuss how integrin mediated adhesion regulates the development and functionality of the different mammalian organ systems based to a large extent on conditional gene knockout studies in mice and on studies in human patients
