Capital Spaces Matthew Carmona,Filipa Matos Wunderlich,2013-05-02 In recent years it has become common place to hear claims that public space in cities across the globe has become the exclusive preserve of the wealthy and privileged at the expense of the needs of wider society Whether it is the privatization of public space through commercial developments like shopping malls and business parks the gentrification of existing spaces by campaigns against perceived anti social behaviour or the increasing domination of public areas by private transport in the form of the car the urban public space is seen as under threat But are things really that bad Has the market really become the sole factor that influences the treatment of public space Have the financial and personal interests of the few really come to dominate those of the many To answer these questions Matthew Carmona and Filipa Wunderlich have carried out a detailed investigation of the modern public spaces of London that most global of cities They have developed a new typology of public spaces applicable to all cities a typology that demonstrates that to properly assess contemporary urban places means challenging the over simplification of current critiques Global cities are made up of many overlapping public spaces good and bad this book shows how to analyze this complexity and to understand it

More than Buildings Sérgio Padrão Fernandes,João Silva Leite,Carlos Dias Coelho,2025-02-03 More than Buildings studies the buildings typology in Portuguese cities and their relationship with the program the way in which it responds to a function the territory where it is integrated and with time and the way in which built forms evolve The book is structured around a set of key theoretical texts that highlight the potential of knowledge about

typology and its specific formal characteristics in the production of new architectural objects In this sense the book has a didactic value based on the theoretical synthesis it produces which allows it to expose certain spatial and formal attributes of the typologies and thus constitute a reference for new processes of architectural production The method of analysis and decomposition of the case studies presented in each chapter provide a useful reading and interpretation key for different readers The typology should be understood as a reference in the act of designing demonstrating how to understand the elementary formal and spatial principles For the municipal authorities or other political decision makers the book will enable them to interpret the value of typology and its relevance in the production of cities This data could be useful for example in planning actions that aim at preserving or converting urban areas of architectural value The book will be relevant to readers within an academic framework and in the professional field engaged in work around architecture cities planning and conservation
