**Components of the Language-Ready Brain** Cedric Boeckx, Antonio Benítez-Burraco, 2016-09-09 This volume highlights new avenues of research in the language sciences and particularly in the neurobiology of language The term language ready brain stresses on the one hand the importance of a brain based description of our species linguistic capacity and on the other the need to appreciate the crucial role culture plays in shaping the linguistic systems children acquire and adults use For this reason the focus is not put on language per se but on our learning biases and cognitive pre dispositions toward language Both brain and culture are considered at two crucial levels of inquiry phylogeny and ontogeny In a fast growing field like the language sciences and specifically language evolution studies this book has tried to capture several of the most exciting topics explored currently sowing seeds for future investigations

**Incommensurability and Cross-Language Communication** Xinli Wang, 2017-05-15 A dominant epistemological assumption behind Western philosophy is that it is possible to locate some form of commonality between languages traditions or cultures such as a common language or lexicon or a common notion of rationality which makes full linguistic communication between them always attainable Xinli Wang argues that the thesis of incommensurability challenges this assumption by exploring why and how linguistic communication between two conceptually disparate

languages traditions or cultures is often problematic and even unattainable According to Wang s presuppositional interpretation of incommensurability the real secret of incommensurability lies in the ontological set ups of two competing presuppositional languages This book provides many original contributions to the discussion of incommensurability and related issues in philosophy and offers valuable insights to scholars in other fields such as anthropology communication linguistics scientific education and cultural studies Language and State Xing Yu,2017-05-19 This book argues that a tribe of the primitive society is formed because of kinship while a state of the civilized society is formed because of language When humans communicate using language they extend the distance and the reaches of communication They expand their communities States replace tribes Language underlies the formation of the state Then accordingly language also underlies the organization of the state as men create language solutions in the organization of the state such as constitution election and representation The extension of linguistic communication distance also underlies the formation of three juxtaposing branches of government administrative legislative and judicial body It also enables men to create various forms of civilization such as history philosophy literature art religion and law which play a role in the construction of men s spirit that guides the operation of the state Language presets the whole process of the progress of civilization
