Evaluation and comparison of ajax frameworks regarding applicability, productivity and technical limitations Lukas Ostermaier, 2008-04-16 Master s Thesis from the year 2008 in the subject Computer Science Internet New Technologies grade 1 0 Vienna University of Technology Department of Distributed and Multimedia Systems language English abstract The rapidly growing popularity of Ajax has led to the publication of numerous frameworks in the last years Not only big companies but also small development teams have developed their own Ajax frameworks or libraries Consequently finding the best framework for a specific project can be difficult and time consuming This thesis compares three of the most popular Ajax frameworks in order to facilitate the technology selection process The evaluation was carried out by implementing a tracking system for public transportation with particular focus on the applicability productivity and technical limitations of each framework and Ajax in general In addition this thesis presents a general approach for the evaluation of arbitrary Ajax frameworks and points out particular issues that should be given special consideration when applying Ajax initially The thesis concludes with a brief analysis of trends that may be relevant to the future development of Ajax

SSH Configuration Interface. Design and Implementation of a "student self-service portal" for accessing to Linux-VMs Gheorghe Mironica, 2021-11-02 Bachelor Thesis from the year 2020 in the subject Computer Science Software grade 1 7 University of Applied Sciences Ulm course Computer Science language English abstract Secure Shell SSH is mainly used for managing most of the world s web servers It creates a secure channel on top of an unsecured network by using the client server model The problem arises with the increase in the number of clients that leads to a corresponding increase in the maintenance work for the server administration This thesis offers an insight into this problem and the solution to it The SSH Configuration Interface SSH CI is one possible solution to simplify the process It s a client server application that provides a simple but intuitive user interface UI to the users so they can upload their public key directly to the server The server thereon handles the request and thus excludes the need of an administration interaction from this process The SSH protocol uses encryption to secure the connection between a client and a server It s mainly used to log into a remote machine and execute commands but there are other useful features available like tunneling and forwarding of Transmission Control Protocol TCP ports An SSH connection supports multiple methods of

authentication the most common being the public key authentication. The advantage of it over a simple password for example is security and flexibility. Public key authentication provides a security level that even extremely long passwords can't offer. In a situation where multiple users have access to the same account on the server by using SSH key authentication it is easy to revoke access to any of them just by deleting their public key from the server. No password has to be shared across the users.
