## **The Fullerenes:**

*The Fullerenes* H.W. Kroto, J.E. Fischer, Deann Cox, 2012-12-02 Until recently the element carbon was believed to exhibit only two main allotropic forms diamond and graphite. Research in the US and Europe has now confirmed the existence of a third previously unknown form buckminsterfullerene C<sub>60</sub> and its relatives the fullerenes C<sub>24</sub> C<sub>28</sub> C<sub>32</sub> C<sub>70</sub> etc. The story of fullerene chemistry, physics, and materials science began in 1985, almost twenty years after the existence of a spherical carbon cluster was first considered. In September 1985, a joint Sussex-Rice Universities team including Kroto, Heath, O'Brien, Curl, and Smalley used a powerful mass spectrometric technique to identify the C<sub>60</sub> species and proposed a spherical structure and the name buckminsterfullerene. It was not, however, until Kratschmer and Huffman reported the isolation of crystals of C<sub>60</sub> in 1990 that the closed cage structure of C<sub>60</sub> could be confirmed. *The Fullerenes* documents the work leading up to 1990 and more recent developments in the field of fullerene research and will serve as an indispensable reference tool for all workers in this area.

**The Handbook of Surface Imaging and Visualization** Arthur T. Hubbard, 2022-04-19 This exciting new handbook investigates the characterization of surfaces. It emphasizes experimental techniques for imaging of solid surfaces and theoretical strategies for visualization of surfaces. Areas in which rapid progress is currently being made. This comprehensive, unique volume is the ideal reference for researchers needing quick access to the latest developments in the field and an excellent introduction to students who want to acquaint themselves with the behavior of electrons, atoms, molecules, and thin films at surfaces. It's all here under one cover. *The Handbook of Surface Imaging and Visualization* is filled with sixty-four of the most powerful techniques for characterization of surfaces and interfaces in the material sciences, medicine, biology, geology, chemistry, and physics. Each discussion is easy to understand, succinct, yet incredibly informative. Data illustrate present research in each area of study. A wide variety of the latest experimental and theoretical approaches are included with both practical and fundamental objectives in mind. Key references are included for the reader's convenience for locating the most recent and useful work on each topic. Readers are encouraged to contact the authors or consult the references for additional information. This is the best ready reference available today. It is a perfect source book or supplemental text on the subject.

**Physics and Chemistry of the Fullerenes** K. Prassides, 2012-12-06 In September 1985, in an attempt to simulate the chemistry in a carbon star, Harry Kroto, Bob Curl, and Richard Smalley set up a mass spectrometry experiment to study the plasma produced by focusing a pulsed laser on solid graphite. Serendipitously, a dominant 720 amu mass peak corresponding to a C<sub>60</sub> species was revealed in the time-of-flight mass spectrum of the resulting carbon clusters. It was proposed that this C<sub>60</sub> cluster had the closed cage structure of a truncated icosahedron, a soccerball, and was named Buckminsterfullerene because geodesic dome concepts pioneered by the architect Buckminster Fuller played an important part in arriving at this solution. The signal for a C<sub>70</sub> species, 840 amu, proposed to have the ellipsoidal shape of a rugbyball, was also prominent in the early experiments. Five years later, the seminal work of the Sussex

Rice collaboration was triumphantly confirmed as Wolfgang Krlitschmer and Donald Huffman succeeded in producing and separating bulk crystalline samples of fullerene material from arc processed in an inert gas atmosphere carbon deposits. From then onwards fullerene research continued and still proceeds at an exhilarating pace. The materials excited the imagination of many diverse classes of scientists resulting in a truly interdisciplinary field. Many of our old seemingly well founded preconceptions in carbon science had to be radically altered or totally abandoned as a new round world of chemistry, physics and materials science began to unfold.

The Fullerenes H. W. Kroto, D. R. M. Walton, 1993-09-09. In 1985 Buckminsterfullerene (C<sub>60</sub>) was discovered serendipitously during graphite laser vaporisation experiments designed to simulate the chemistry in a red giant carbon star. The molecule was isolated for the first time in macroscopic amounts in 1990, a breakthrough which triggered an explosion of research into its chemical and physical properties. The fullerenes hold great potential for material science applications such as semiconductors and microscopic engineering and as new compounds for pharmaceuticals, polymers and the chemical industry. In October 1992 a Discussion Meeting of the Royal Society entitled 'A Post Buckminsterfullerene View of the Chemistry, Physics and Astrophysics of Carbon' organised by H. W. Kroto, A. L. Mackay, G. Turner and D. R. M. Walton was held to celebrate this exciting advance. The scientists who played key roles in the discovery and who are currently uncovering fascinating problems and the implications of this elegant molecule presented the papers published in this book.

The Chemistry of the Fullerenes Andreas Hirsch, 2008-09-26. Although synthetic fullerenes have only been around for a few years, there are thousands of scientific articles dealing with them. This is the first monograph in the field and thus represents a vital source of information summarizing the most important and fundamental aspects of the organic and organometallic chemistry of the fullerenes. The book is logically arranged so that information is easy to retrieve and the style lends itself to effortless reading and to learning more about the chemical properties of a family of molecules that constitute new building blocks for novel architectures in the ever expanding universe of synthetic chemistry. Belongs on the shelves of university libraries as well as those of chemists interested in the art and science of structure and property manipulation by synthesis.
