New,2002 This is the first introductory text to deal with the problems caused by insects as pests in Australian agriculture and related primary industry and the use of insects to combat pests such as insects and weeds It emphasizes Australian examples throughout and is designed specifically to reflect traditional and recent developments associated with pest management in Australia and other countries The development of integrated pest management is a central theme but chapters are provided on all major facets of pest control with accounts of their development importance and contributions to current management strategy and practice Each chapter concludes with suggestions for further reading and the most recent references are cited to give students applied entomologists researchers and agriculturists the most current and comprehensive information available      **Beyond IPM: Introduction to the Theory of Holistic Pest Management** Juan F. Barrera,2020-04-07 About 15 years ago we asked ourselves why the methods developed by the research institutions for the management of pests were almost not used by small landholder farmers It seemed obvious to us that conventional pest control called Integrated Pest Management was based on a reductionist approach In reviewing the literature on the subject we found that our concern was not new or unique The agreement of some authors with our ideas reinforced our efforts to find a holistic approach to pest management We took two central ideas to develop the holistic approach First pest management actions must put the farmer at the center of the system Second pest management must consider not only both pests but the other important components of the system in question This approach based on the farmers and the systems in which they are immersed is called Holistic Pest Management or HPM In this book I present the philosophy and practice of HPM a new paradigm of pest management      *American Entomologist* ,2006
