Systems Carole B. Cheatham,Leo R. Cheatham,1993-03-24 The new manufacturing environment requires new cost accounting systems as well as new technology While some authorities have advocated installing new and untried systems the authors of this book recommend updating the standard cost system which 85 percent of manufacturing firms have in place Updating the present system can achieve greater benefits in terms of providing information to managers for decision making It also allows the organization to avoid disruption to the corporate culture and the cost associated with a new system The authors show how standard cost systems can be redesigned to measure factors recognized to be important in today's manufacturing environment such as quality production levels and throughput They demonstrate how standard cost systems can foster continuous improvement through dynamic rather than static standards After examining characteristics of the new

manufacturing environment and benefits of upgrading the cost system ways to update the traditional standard cost system are discussed Revisions include a unique input output method of variance analysis specific metrics related to manufacturing performance ways to identify cost drivers and use of dynamic standards The authors demonstrate how to redesign the information gathering and reporting system as new manufacturing procedures are put in place They discuss ways that marketing activities are affected and how to plan plant and equipment expenditures in an automated environment This book is directed primarily towards accountants and managers needing to improve informational content of accounting data for decision making purposes It should also be beneficial to any person within the business firm who either supplies data of this type or uses it such as project analysts controllers managers and even management trainees Academicians teaching cost and managerial accounting as well as those teaching production management and financial decision making courses should find it beneficial as a text supplement or as a primary text in courses dealing with current problems in today s changing manufacturing environment    **Die Casting Engineer** ,1991    *Productivity* ,2001    Management Accounting Research ,1999
