Symplectic Cobordism Ring:

The Symplectic Cobordism Ring II Stanley O. Kochman, 1982 This paper is the second of three which investigate the ring of cobordism classes of closed smooth manifolds with a symplectic structure on their stable normal bundle. The method of computation is the Adams spectral sequence. In this paper the d_3 differentials are computed by Landweber, Novikov and Massey product methods. In addition cup one products are introduced in the theory of bordism chains and a complex is constructed to represent an Adams spectral sequence.

Kochman, 1982-12-31 [The Symplectic Cobordism Ring III](#) Stanley O. Kochman, 1990 *Symplectic Cobordism and the Computation of Stable Stems* Stanley O. Kochman, 1993 This memoir consists of two independent papers. In the first The symplectic cobordism ring III the classical Adams spectral sequence is used to study the symplectic cobordism ring capital Greek Omega superscript over subscript italic capital S subscript italic p. In the second The symplectic Adams Novikov spectral sequence for spheres we analyze the symplectic Adams Novikov spectral sequence converging to the stable homotopy groups of spheres.

[Analytic and Combinatorial Generalizations of the Rogers-Ramanujan Identities](#) David M. Bressoud, Maynard Arsove, Michel Cahen, 1980 [Moment Maps, Cobordisms, and Hamiltonian Group Actions](#) Victor Guillemin, Viktor L. Ginzburg, Yael Karshon, 2002 During the last 20 years localization has been one of the dominant themes in the area of equivariant differential geometry. Typical results are the Duistermaat-Heckman theory, the Berline-Vergne-Atiyah-Bott localization theorem in equivariant de Rham theory, and the quantization commutes with reduction theorem and its various corollaries. To formulate the idea that these theorems are all consequences of a single result involving equivariant cobordisms the authors have developed a cobordism theory that allows the objects to be non-compact manifolds. A key ingredient in this non-compact cobordism is an equivariant geometrical object which they call an abstract moment map. This is a natural and important generalization of the notion of a moment map occurring in the theory of Hamiltonian dynamics. The book contains a number of appendices that include introductions to proper group actions on manifolds, equivariant cohomology, Spin manifolds, and stable complex structures. It is geared toward graduate students and research mathematicians interested in differential geometry. It is also suitable for topologists, Lie theorists, combinatorists, and theoretical physicists. Prerequisite is some expertise in calculus on manifolds and basic graduate level differential geometry.

Algebraic Topology. Waterloo 1978 P. Hoffman, V. Snaith, 2006-11-15 [Canadian Journal of Mathematics](#), 1994-06 [Manifolds with Singularities and the Adams-Novikov Spectral Sequence](#) Boris I. Botvinnik, 1992-07-23 Many interesting results not widely known outside the USSR are brought together in this analysis of the Adams-Novikov spectral sequence, a tool that has enabled the computation of generators and relations to describe homotopy groups.

[Canadian Journal of Mathematics](#), 1994-06 **Topology I** S.P. Novikov, 2013-06-29 Introduction In the present essay we attempt to convey some idea of the skeleton of topology and of various topological concepts. It must be said at once that apart from the necessary

minimum the subject matter of this survey does not include that subdiscipline known as general topology the theory of general spaces and maps considered in the context of set theory and general category theory Doubtless this subject will be surveyed in detail by others With this qualification it may be claimed that the topology dealt with in the present survey is that mathematical subject which in the late 19th century was called Analysis Situs and at various later periods separated out into various subdisciplines Combinatorial topology Algebraic topology Differential or smooth topology Homotopy theory Geometric topology With the growth over a long period of time in applications of topology to other areas of mathematics the following further subdisciplines crystallized out the global calculus of variations global geometry the topology of Lie groups and homogeneous spaces the topology of complex manifolds and algebraic varieties the qualitative topological theory of dynamical systems and foliations the topology of elliptic and hyperbolic partial differential equations Finally in the 1970s and 80s a whole complex of applications of topological methods was made to problems of modern physics in fact in several instances it would have been impossible to understand the essence of the real physical phenomena in question without the aid of concepts from topology
