The Fundamental Interaction Geometrical Trends:

The Fundamental Interaction J. Debrus,1988-09-01 *Geometry of the Fundamental Interactions* M. D. Maia,2011-06-14 The Yang Mills theory of gauge interactions is a prime example of interdisciplinary mathematics and advanced physics Its historical development is a fascinating window into the ongoing struggle of mankind to understand nature The discovery of gauge fields and their properties is the most formidable landmark of modern physics The expression of the gauge field strength as the curvature associated to a given connection places quantum field theory in the same geometrical footing as the gravitational field of general relativity which is naturally written in geometrical terms The understanding of such geometrical property may help one day to write a unified field theory starting from symmetry principles Of course there are remarkable differences between the standard gauge fields and the gravitational field which must be understood by mathematicians and physicists before attempting such unification In particular it is important to understand why gravitation is not a standard gauge field This book presents an account of the geometrical properties of gauge field theory while trying to keep the equilibrium between mathematics and physics At the end we will introduce a similar approach to the gravitational field **New Trends in Geometry** Luciano Boi,2011 This volume focuses on the interactions between mathematics physics biology and neuroscience by exploring new geometrical and topological modelling in these fields Among the highlights are the central roles played by multilevel and scale change approaches in these disciplines The integration of mathematics with physics as well as molecular and cell biology and the neurosciences will constitute the new frontier of 21st century science where breakthroughs are more likely to span across traditional disciplines

Of The Meeting (In 2 Parts) Tsvi Piran, Remo Ruffini, 1999-05-14 Since 1975 the Marcel Grossmann Meetings have been organized to provide opportunities for discussing recent advances in gravitation general relativity and relativistic field theories emphasizing mathematical foundations physical predictions and experimental tests The objective of these meetings is to facilitate exchange among scientists that may deepen our understanding of space time structures and to review the status of ongoing experiments aimed at testing Einstein's theory of gravitation from either the ground or space The Eighth Marcel Grossmann Meeting took place on 22-27 June 1997 at the Hebrew University of Jerusalem Israel The scientific program included 25 plenary talks and 40 parallel sessions during which 400 papers were presented The papers that appear in this book cover all aspects of gravitation from mathematical issues to recent observations and experiments [Progress of Theoretical Physics](#), 1993 [**Directory of Published Proceedings**](#), 1998 [Quantum Groups](#) Heinz Dietrich
