The Biohistory of Feminism Carol Blakney, Abel Alves, 2026-02-02 The Biohistory of Feminism is a multilayered project that incorporates evolutionary biology to argue that behaviors labelled feminist by human cultures are already found in nature and that there is no one path to being female. On a planet where asexual reproduction dominates intersex and parthenogenesis exist and eusocial females contribute to their colonies without reproducing being female goes beyond motherhood stereotypes dear to those who attempt to perpetuate a universal idea of male dominance in human history. Feminism exists naturally as a series of efforts to express oneself in a multiplicity of ways freely chosen including the attainment of alpha status as a social animal managing resources and forming alliances. Elephant matriarchs and alpha female bonobos were there among social animals before the appearance of human monarchs like Wu Zetian and contemporary politicians like Angela Merkel and cultural leaders like Wangari Maathai. Female dolphins and chimpanzees taught cultural traditions before the intellectual achievements of literary figures like Sor Juana Inés de la Cruz and scientists like Jane Goodall. The diversity of female expression in nature is natural. *The Wildlife Techniques Manual* Nova J. Silvy, 2020-07-28

Electronic Noses and Tongues in Food Science Maria Luz Rodriguez Mendez,2016-02-19 Electronic Noses and Tongues in Food Science describes the electronic products of

advanced chemical and physical sciences combined with intuitive integration of microprocessors advanced bioinformatics

and statistics These include for example voltammetric bio electronic piezoelectric platforms made from a variety of

components including nanoparticles enzyme biosensors heavy metals graphite epoxy composites metal oxide semiconductors microelectrodes microfluidic channels pre manufactured gas sensors redox enzymes and others and is an ideal resource for

understanding and utilizing their power in Food Science settings Devices used to analyse one particular food item can

theoretically be adapted for other food items or components. This does not just mean the re-deploying the physical platforms but also the mode of bioinformatic and statistical analysis. This includes artificial neural networks ANN linear discriminant analysis LDA partial least squares PLS principal component analysis PCA etc. In other words there is cross transference of chemistry physics concepts techniques findings and approaches from one food to another. Electronic noses and tongues are two of these devices but are advancing in application and importance. This book provides examples of the use of electronic noses and tongues to characterise components that contribute to sensory or compositional profiles from ripening to harvesting and from storage of raw materials to packaging and consumption. These devices are suitable for high throughput analysis quality control or to determine the nature and extent of spoilage and adulteration and have also been used to ascertain the geographical origins of food and mixtures. Presents latest developments in the application of electronic nose and tongue technologies to a variety of food specific needs. Includes both electronic nose electronic tongue and combined technology insights. Each chapter has sections on The physical and chemical platforms Analysis of specific foods Applications to other foods and areas of food science.
