Kenneth R. Lang, Charles A. Whitney, 1991-03-21 How were the features on the Moon created? What is the evidence for past or future life on Mars? What might cause the Earth to become as hot and steamy as Venus? Why do some say that a colliding asteroid wiped out the dinosaurs 65 million years ago? From the earliest of times the human race has pondered upon the nature of the Heavens. The moons and planets have changed from mere points of light to fascinating diverse worlds. Spacecraft have visited all the planets known to ancient people. Human beings have visited the Moon and robot spacecraft have landed on Venus and Mars. This book presents the result of this captivating voyage of discovery recording more than two decades of extraordinary accomplishments. The voyage starts with the still silent and lifeless Moon. Then on to the contrasting world of Mars with its towering volcanoes and deep canyons. The exploration continues across asteroid belts and icy comets to the outer planets where Voyager II revealed cyclonic storms liquid hydrogen and helium rain and the beautiful pink and blue dynamic world of Neptune. This book includes numerous photos from spacecraft as well as a few works of modern art. They provide the best available metaphors and images of the previously invisible worlds. **Literature 1981**,

This is not a who's who. Instead each entry provides an in depth essay on the life and career of the individual concerned. Essays commence with a quick reference section that provides basic facts on the individual's life and achievements. The extended biography places the life and works of the individual within an historical context and the summary at the end of each essay provides a synopsis of the individual's place in history. All entries conclude with a fully annotated bibliography. *The Comet Book* Robert DeWitt Chapman, John C.
