Cold Fire Peter R. Ellis, 2017-08-04 London 1680 The famous philosopher Sir Robert Boyle is about to demonstrate the results of his investigations of the phosphorus and its cold fire to fellows of the Royal Society and other guests Far away at the edge of Wales an alchemist learns of the discovery and helped by his young assistant attempts in his own way to form the mysterious material little suspecting that his work threatens to open the universe to the evil power of the Malevolence Summoned by the Brains September the Cludydd o Maengolauseren arrives charged with halting the Malevolence s storm of destruction But how She finds herself out of her time and in a world not quite her own Nevertheless her experience of the Malevolence tells her that she must do something The fantastic beasts she encounters may come to her aid if she can work out how to save them from the Cold Fire For September hardly any time has passed since she was trying to save Gwlad in Peter R Ellis thrilling fantasy series Evil Above the Stars Now in the first of the September Weekes novels she appears to be closer to home at least in space if not time But not everything is as she d expect it and she still seems to be wearing her school uniform Combining science fantasy and adventure this is a novel truly worthy of the designation Speculative Fiction

Non-Asymptotic Theory of Waves in Excitable Media Across Nature and Technology Zhizhin, Gennadiy

Vladimirovich,2025-04-25 The non asymptotic theory of waves in excitable media refers to the complex dynamics of wave phenomena in systems that exhibit excitable behavior spanning both natural and technological contexts. Unlike traditional asymptotic theories that focus on long term behavior, non asymptotic approaches emphasize the transient finite time dynamics of wave propagation, pattern formation, and instability within excitable media. These systems reveal diverse wave behaviors. Understanding the non asymptotic characteristics of these waves offers crucial insights into processes such as heart arrhythmias, neural signaling, chemical oscillations, and engineered wave control mechanisms, making it a vital area of study across multiple fields. Non Asymptotic Theory of Waves in Excitable Media Across Nature and Technology explores various wave processes in gaseous and condensed media, the flight model of gregarious locusts and bark beetles, emissions of prominences on the sun, and other processes. The methods described can also be used in other examples of wave propagation in excitable media. This book covers topics such as spatiotemporal chaos, spiral wave dynamics, and nonlinear wave propagation, and is a useful resource for scientists, academicians, engineers, and researchers.
