Stellar Physics Vol 2 Stellar Evolution And Stability:

Stellar Physics G. S. Bisnovatyi-Kogan, 2010-12-01 Stellar Physics is a rather unique book in the growing literature on star formation and evolution. Not only does the author, a leading expert in the field, give a very thorough description of the current knowledge about stellar physics, but he handles with equal care the many problems that this field of research still faces. A bibliography with well over 650 entries makes this book an unparalleled source of references. Stellar Evolution and Stability is the second volume and can be read as can the first volume as a largely independent work. It traces in great detail the evolution of the protostar towards the main sequence and beyond this to the last stage of stellar evolution with the corresponding vast range from white dwarfs to the mighty supernovae explosions and blackhole formation. The book concludes with special chapters on the dynamical thermal and pulsing stability of stars. Stellar Physics Gennady S. Bisnovatyi-Kogan, 2011-01-04 Stellar Physics is an outstanding book in the growing body of literature on star formation and evolution. Not only does the author, a leading expert in the field, very thoroughly present the current state of knowledge on stellar physics, but he handles with equal care the many problems that this field of research still faces. A bibliography with well over 1000 entries makes this book an unparalleled reference source. Stellar Evolution and Stability is the second of two volumes and can be read as can the first volume Fundamental Concepts and Stellar Equilibrium as a largely independent work. It traces in great detail the evolution of protostars towards the main sequence and beyond this to the last stage of stellar evolution with the corresponding vast range from white dwarfs to supernovae explosions, gamma ray bursts and black hole formation. The book concludes with special chapters on the dynamical thermal and pulsing stability of stars. This second edition is carefully updated in the areas of pre supernova models, magnetorotational supernovae and the theory of accretion disks around black holes. Additional sections have been added on strange quark stars, jet formation and collimation, radiation driven winds in strong gravitational fields and gamma ray bursts. **Stellar Physics** Gennady S.
