Advances in Neuromodulation Treatment of Parkinson's Disease and Aging-Related Movement Disorders Kailiang Wang, Fangang Meng, Yuqing Zhang, Adolfo Ramirez-Zamora, Shin-Yuan Chen, 2024-04-22 Parkinson's disease PD is an age related neurodegenerative disorder characterized by progressive motor disability with a spectrum of non motor symptoms. Similar to Parkinson's disease essential tremor, dystonia, Huntington's disease and other aging related movement disorders are widespread in the elderly with relatively unideal medicine treatment effects. In recent years deep brain stimulation DBS has been established as an effective treatment for PD and other aging related movement disorders especially with motor symptoms. However, there are still many problems to be solved in research work and clinical practice in this field. For example, it is unclear regarding the most effective stimulation targets or the underlying mechanism of DBS. And it is still unknown how to choose the optimal targets among STN, GPi, PSA, VIM etc or if we could choose the nerve fiber for stimulation besides the nuclei. And despite wearable sensors could be a powerful tool for the digital evaluation of movement disorders or provide the feedback biomarkers for DBS, the closed loop biomarkers for DBS are still lacking. Furthermore, apart from PD, the DBS treatment in gene related dystonia, Huntington's disease and other movement disorders also needs to be further explored.

*Analyzing the relationship between dietary patterns, health outcomes and individual food choices* Francesco Vissioli, Francesco Sofi, 2023-01-30 Dietary Patterns Affecting Cardiovascular Health Iain Brownlee, Amedeo Amedei, Galya Bigman, Stefano Fumagalli, 2024-08-30 Cardiovascular diseases CVDs are the leading cause of death globally. Poor dietary habits appear to be the major modifiable risk factor for morbidity and mortality from CVDs. Therefore, improving dietary habits and adopting food and nutrient based dietary guidelines as part of a global public health strategy is of critical importance to preventing and managing end stage disease thereby reducing the direct and indirect costs associated with CVDs. Data from the Global Burden of Disease Study 2017 suggest that over 80% of disability adjusted life years and deaths resulting from poor diet are a result of cardiovascular health issues. In many instances the underlying mechanism linking intake of food nutrients or whole diets to cardiovascular function has not been fully elucidated. *Modern Nutrition in Health and Disease* Katherine L. Tucker, Christopher Duggan, Gordon Jensen, Karen Peterson, 2024-12-11 This widely acclaimed and authoritative reference first published in 1950 offers coverage of nutrition's role in disease prevention, international nutrition issues, public health concerns, the role of obesity in a variety of chronic illnesses, genetics as it applies to nutrition, and areas of major scientific progress relating nutrition to disease. **Traditional Chinese Medicine (TCM): A multi target approach to complex cardiovascular disease - Volume I** Jing-Yan Han, Gerald A.
