The ALPHA Automatic Programming System Andreĭ Petrovich Ershov,1971   Logic for Programming and Automated Reasoning Michel Parigot,Andrei Voronkov,2003-07-31 This book constitutes the refereed proceedings of the 7th International Conference on Logic for Programming and Automated Reasoning LPAR 2000 held in Reunion Island France in November 2000 The 26 revised full papers presented together with four invited contributions were carefully reviewed and selected from 65 submissions The papers are organized in topical sections on nonmonotonic reasoning descriptive complexity specification and automatic proof assistants theorem proving verification logic programming and constraint logic programming nonclassical logics and the lambda calculus logic and databases program analysis mu calculus planning and reasoning about actions   **Advanced Programming Methodologies** Gianna Cioni,Andrzej Salwicki,2014-05-10 Advanced Programming Methodologies consists of lecture demos and practical experiments from the Summer School on Advanced Programming Methodologies which took place in Rome Italy on September 17 24 1987 The school focused on tools of advanced programming as well as theoretical foundations for software engineering Problems connected with implementation and application of high level programming languages are highlighted Comprised of 11 chapters this volume first looks at two software development projects at the Institute of Informatics of the University of Warsaw in Poland with emphasis on the methodologies used in programming and implementation The reader is then introduced to flexible specification environments object oriented programming and Paragon s type hierarchies for data abstraction Subsequent chapters focus on the inheritance rule in object oriented programming a functional programming approach to modularity in large software systems database management systems and relational algebra and fixpoint computation for logic programming implementation The book also examines modules in high level programming languages before concluding with a chapter devoted to storage management This book is intended for computer programmers undergraduate students taking various courses in programming and advanced students of computer science   *The Structure and Design of Programming Languages* John E. Nicholls,1975 Introduction background and technical foundations User aspects Elements of procedural programming languages   Studies in Operating Systems R. M. McKeag,R. Wilson (M.Sc.),1976 Presents the structure and technology of selected operating systems Contains the descriptions of four key operating systems which have made significant contributions to the operating systems development   **Library of Congress Catalogs** Library of Congress,1976   **Lucid, the Dataflow Programming Language** William W. Wadge,Edward A. Ashcroft,1985 Lucid is anew dataflow language designed to exploit the capabilities of the multi processor machines which are more powerful than single processor machines and require a language in which highly parallel algorithms can be easily expressed The primary objective of this book is to prove that dataflow is a real alternative to sequential imperative computing and that dataflow algorithms can be expressed naturally and concisely in Lucid   アメリカの出版物 ,1976   **American Book Publishing Record Cumulative, 1950-1977** R.R.

Ershov,1990-03-21 The book begins with a detailed discussion of two problems that have played an extremely important role in the emergence of theoretical programming as an independent discipline The principal goals in this book are to explain the line of thought that was followed in solving these problems demonstrate the workings of the mathematical way of thinking carefully analyze the different stages of descriptive analysis and problem formulation and reveal the aesthetic component in the search for solutions in other words to try to turn the reader into a true witness of the process of discovering mathematical results In the first part of the book the author considers the storage minimization packing or storage problem schemas The problem of storage packing is treated as an example that illustrates how to solve an application problem by means of mathematical methods In the second part the author presents the theory of Yanov program schemas a classical theory generally recognized as having served as a foundation of the mathematical theory of programming This is analyzed as a methodological example that illustrates how a fully developed theory can be extended to a new class of phenomena and objects program schemas and configurations of program schemas *Introduction to the Graphical Kernal System (GKS)* Frank Robert Albert Hopgood,1986-01-28 This highly acclaimed introduction to the Graphical Kernel System GKS has now been revised and updated following the publication of the International Standard ISO 7942 in August 1985 and the draft international standard ISO 8651 for the FORTRAN Pascal and Ada GKS language bindings The main aim of this book is to provide an introduction to the concepts of GKS and the FORTRAN language binding A basic knowledge of computer graphics is assumed The first part of the text covers the background and major ideas of the system and the second covers those features more likely to be required by the specialist graphics programmer Appendices and an index allow the work to be used as a reference manual All application programmers with an interest in computer graphics will find this book an invaluable aid **Computer Architecture** R. A. Jackson,1975 The original program design text this book is about programming for data processing applications and it presents a coherent method and procedure for designing systems programs and components that are transparently simple and self evidently correct The main emphasis is on the structure on the dissection of a problem into parts and the arrangement of those parts to form a solution Exercises and questions for discussion are given at the end of almost every chapter **Theorem Proving with the Real Numbers** John Harrison,2012-12-06 This book discusses the use of the real numbers in theorem proving Typ ically theorem provers only support a few discrete datatypes such as the natural numbers However the availability of the real numbers opens up many interesting and important application areas such as the verification of float ing point hardware and hybrid systems It also allows the formalization of many more branches of classical mathematics which is particularly relevant for attempts to inject more rigour into computer algebra systems Our work is conducted in a version of the HOL theorem prover We de scribe the rigorous definitional construction of the real numbers using a new version of Cantor s method and the formalization of a significant portion of real analysis We also describe an advanced derived decision procedure for the Tarski subset of real algebra as well as some more modest but practically useful tools for automating explicit calculations and routine linear arithmetic reasoning Finally we consider in more detail two interesting application areas We discuss the desirability of combining the rigour of theorem provers with the power and convenience of computer algebra systems and explain a method we have used in practice to achieve this We then move on to the verification of floating point hardware After a careful discussion of possible correctness specifications we report on two case studies one involving a transcendental function **National Union Catalog** ,1973 **Introduction to Logic Programming** Christopher John Hogger,1984
