Key Of The Chest:

Key of the Chest Random House,1998-04-01 *The Key of the Chest* Neil Miller Gunn,1966 **The Key of the Chest**
Neil M. Gunn,1946 **Foundations of Security** Christoph Kern,Anita Kesavan,Neil Daswani,2007-05-11 Foundations of Security What Every Programmer Needs to Know teaches new and current software professionals state of the art software security design principles methodology and concrete programming techniques they need to build secure software systems Once you're enabled with the techniques covered in this book you can start to alleviate some of the inherent vulnerabilities that make today's software so susceptible to attack The book uses web servers and web applications as running examples throughout the book For the past few years the Internet has had a wild wild west flavor to it Credit card numbers are stolen in massive numbers Commercial web sites have been shut down by Internet worms Poor privacy practices come to light and cause great embarrassment to the corporations behind them All these security related issues contribute at least to a lack of trust and loss of goodwill Often there is a monetary cost as well as companies scramble to clean up the mess when they get spotlighted by poor security practices It takes time to build trust with users and trust is hard to win back Security vulnerabilities get in the way of that trust Foundations of Security What Every Programmer Needs To Know helps you manage risk due to insecure code and build trust with users by showing how to write code to prevent detect and contain attacks The lead author co founded the Stanford Center for Professional Development Computer Security Certification This book teaches you how to be more vigilant and develop a sixth sense for identifying and eliminating potential security vulnerabilities You'll receive hands on code examples for a deep and practical understanding of security You'll learn enough about security to get the job done **The Locked Chest** John Masefield,1916 *Privacy Is Hard and Seven Other Myths*
Jaap-Henk Hoepman,2023-10-03 An expert on computer privacy and security shows how we can build privacy into the design of systems from the start We are tethered to our devices all day every day leaving data trails of our searches posts clicks and communications Meanwhile governments and businesses collect our data and use it to monitor us without our knowledge So we have resigned ourselves to the belief that privacy is hard choosing to believe that websites do not share our information for example and declaring that we have nothing to hide anyway In this informative and illuminating book a computer privacy and security expert argues that privacy is not that hard if we build it into the design of systems from the start Along the way Jaap Henk Hoepman debunks eight persistent myths surrounding computer privacy The website that claims it doesn't collect personal data for example Hoepman explains that most data is personal capturing location preferences and other information You don't have anything to hide There's nothing wrong with wanting to keep personal information even if it's not incriminating or embarrassing private Hoepman shows that just as technology can be used to invade our privacy it can be used to protect it when we apply privacy by design Hoepman suggests technical fixes discussing pseudonyms leaky design encryption metadata and the benefits of keeping your data local on your own device only and outlines privacy design
