Spatial And Temporal Dynamics Of Host Parasitoid Interactions:

The Spatial and Temporal Dynamics of Host-Parasitoid Interactions Michael Hassell,2000-06-08 This book examines our current understanding of the population dynamics of one kind of interaction that between insect parasitoids and their hosts Parasitoids are amongst the most abundant of all animals and make up about 10% or more of metazoan species Almost no insect species escape their attack Host parasitoid interactions were first modelled over fifty years ago but for many years there was little good empirical information on the important factors that affect host and parasitoid populations The models were very simple and their predictions rather divorced from the complexity of what was visible in the field Now better data is available on many components of host parasitoid systems from field observations and laboratory and field experiments and this allows a much closer correspondence between models and data In particular the past twenty years have seen major advances in our understanding of how host parasitoid interactions are influenced by spatial processes by age structure effects and by competition from additional host and parasitoid species The result is a body of theory that makes direct contact with real systems in the field and provides us with a detailed understanding of what underpins a whole area of population dynamics In this book Michael P Hassell pulls the theory and field data together to present an elegant illustration of the way in which ecological studies advance

Mathematics Research for the Beginning Student, Volume 2 Eli E. Goldwyn,Sandy Ganzell,Aaron Wootton,2022-11-17 Mathematics research opportunities for undergraduate students have grown significantly in recent years but accessible research topics for first and second year students are still hard to find To address this need this volume provides beginning students who have already had some exposure to calculus with specific research projects and the tools required to tackle

them Chapters are self contained presenting projects students can pursue along with essential background material and suggestions for further reading In addition to calculus some of the later chapters require prerequisites such as linear algebra and statistics Suggested prerequisites are noted at the beginning of each chapter Some topics covered include lattice walks in the plane statistical modeling of survival data building blocks and geometry modeling of weather and climate change mathematics of risk and insurance Mathematics Research for the Beginning Student Volume 2 will appeal to undergraduate students at two and four year colleges who are interested in pursuing mathematics research projects Faculty members interested in serving as advisors to these students will find ideas and guidance as well This volume will also be of interest to advanced high school students interested in exploring mathematics research for the first time A separate volume with research projects for students who have not yet studied calculus is also available **The Theoretical Biologist's Toolbox**

Marc Mangel,2006-07-27 Mathematical modelling is widely used in ecology and evolutionary biology and it is a topic that many biologists find difficult to grasp In this new textbook Marc Mangel provides a no nonsense introduction to the skills needed to understand the principles of theoretical and mathematical biology Fundamental theories and applications are introduced using numerous examples from current biological research complete with illustrations to highlight key points Exercises are also included throughout the text to show how theory can be applied and to test knowledge gained so far

Suitable for advanced undergraduate courses in theoretical and mathematical biology this book forms an essential resource for anyone wanting to gain an understanding of theoretical ecology and evolution [How Species Interact](#) Roger Arditi,Lev R. Ginzburg,2012-05-11
