Spatial Filtering Daniel A. Griffith, 2003-07-10 Exploiting the old maxim that a picture is worth a thousand words scientific visualization may be defined as the transformation of numerical scientific data into informative graphical displays It introduces a nonverbal model into subdisciplines that hitherto employed mostly or only mathematical or verbal conceptual models The focus of this monograph is on how scientific visualization can help revolutionize the manner in which the tendencies for dissimilar numerical values to cluster together in location on a map are explored and analyzed affording spatial data analyses that are better understood presented and used In doing so the concept known as spatial autocorrelation which characterizes these tendencies and is one of the key features of georeferenced data or data tagged to the earth's surface is further demystified This self correlation arises from relative locations in geographic space **Spatial**

Piquero, David

Weisburd, 2009-12-16 Quantitative criminology has certainly come a long way since I was first introduced to a largely qualitative criminology some 40 years ago when I was recruited to lead a task force on science and technology for the President's Commission on Law Enforcement and Administration of Justice At that time criminology was a very limited activity depending almost exclusively on the Uniform Crime Reports UCR initiated by the FBI in 1929 for measurement of crime based on victim reports to the police and on police arrests A typical mode of analysis was simple bivariate correlation Marvin Wolfgang and colleagues were making an important advance by tracking longitudinal data on arrests in Philadelphia an innovation that was widely appreciated And the field was very small I remember attending my first meeting of the American Society of Criminology in about 1968 in an anteroom at New York University there were about 25-30 people in attendance mostly sociologists with a few lawyers thrown in That Society today has over 3,000 members mostly now drawn from criminology which has established its own clear identity but augmented by a wide variety of disciplines that include statisticians

economists demographers and even a few engineers This Handbook provides a remarkable testimony to the growth of that old Following the maxim that if you can't measure it you can't understand it we have seen the early dissatisfaction with the UCR replaced by a wide variety of new approaches to measuring crime victimization and offending **Spatial**
