themes and highlights the increasing complexity of the security environment and the uncertainty of future war. The sense of time and speed has been and is being compressed by developments in quantum technologies, the cyber domain, artificial intelligence, the increased capabilities of sensors and data collection, as well as new propulsion technologies such as hypersonic designs. Concepts regarding the shape and extent of the battlefield are challenged by the notion of hybrid war and sub threshold tactics, as well as new domains in which competition is increasing such as space. Further challenging the shape of the battlefield is the increased development of remote and autonomous warfare. Commercial developments will affect how military production is owned and managed and how military forces are composed. Thus a confluence of new technologies exists combining to create the potential of fundamental transformation at many levels. This wave of technological change has been called the Fourth Industrial Revolution (4IR) characterised by an exponential rather than a linear rate of change generated by convergence and complementarity of emerging technology domains. These may not affect the fundamental Clausewitzian nature of war but they will likely affect its character. From a military perspective the key will be the impact on the speed of operations and on the shape of the operational domain, the factors of time and space. The combination of these shifts will increasingly affect the perception of states and the degree of certainty in approaching and engaging in conflict.

**Introduction to Cyber Politics and Policy** Mary Manjikian, 2019-12-20. Introduction to Cyber Politics and Policy is a comprehensive introductory textbook for cyber politics and security courses and the perfect addition to any International Relations or Intelligence course. Written by Mary Manjikian, an expert in the field and an instructor who has taught the course for ten years, it assumes no prior knowledge of technical concepts, legal concepts, military concepts, or international relations theory. Instead, she aims to bridge the gaps between the intricacies of technology and the theories of political science. The book emphasizes the importance of collaboration and understanding between the two fields; students from both technology and political science backgrounds need to understand the implications of technology decisions and the policy questions that arise from them in order to make a meaningful contribution to the ever-changing field.

**The Myth and Reality of Space Exploration - the Final Frontier** Deon L. Pinson, 2011-06-02. Using humor, science, and science fiction, the author describes the next generation of space exploration, which is both possible and on the near horizon. Mankind fails in some respect to make the next leap, no matter what the subject or endeavor is about. Some are satisfied that they have achieved the goal, establish no new goal, and in essence do not take their idea to the next level, and the next after that. The United States and the world got to space, then quit and became complacent. As a species, mankind is ready now for that next leap: first to the planet Mars, then beyond to the rest of the solar system. Once the next test is finalized, the universe opens to mankind because the next risk is the last risk in establishing our identity universally. We, the aliens from Earth, will land. The final frontier opens up for the voyages of the future. Read the book, understand the reality, and in both life and beyond your present realities, always take another step. Jedidiah
