Spatial Databases Philippe Rigaux, Michel Scholl, Agnès Voisard, 2002 The authors explore and explain current techniques for handling the specialised data that describes geographical phenomena in a study that will be of great value to computer scientists and geographers working with spatial databases.

Web and Wireless Geographical Information Systems James D. Carswell, Stewart Fotheringham, Gavin McArdle, 2009-11-30 This book constitutes the refereed proceedings of the 9th International Symposium on Web and Wireless Geographical Information Systems W2GIS 2009 held in Maynooth, Ireland in December 2009. The 12 revised full papers presented together with two invited talks were carefully reviewed and selected from numerous submissions. The papers span a wide area including but not limited from geospatial analysis and personalization and semantic geo spatial web to W2GIS case studies and web and mobile applications and prototypes.

Handbook of e-Tourism Zheng Xiang, Matthias Fuchs, Ulrike Gretzel, Wolfram Höpken, 2022-09-01 This handbook provides an authoritative and truly comprehensive overview both of the diverse applications of information and communication technologies (ICTs) within the travel and tourism industry and of e tourism as a field of scientific inquiry that has grown and matured beyond recognition. Leading experts from around the world describe cutting edge ideas and developments, present key concepts and theories, and discuss the full range of research methods. The coverage accordingly encompasses everything from big data and analytics to psychology, user behavior, online marketing, supply chain and operations management, smart business networks, policy and regulatory issues and much much more. The goal is to provide an outstanding reference that summarizes and synthesizes current knowledge and establishes the theoretical and methodological foundations for further study of the role of ICTs in travel and tourism. The handbook will meet the needs of researchers and students in various disciplines as well as industry professionals. As with all volumes in Springer's Major Reference Works program, readers will benefit from access to a continually updated online version.

GeoSpatial Semantics Frederico Fonseca, M. Andrea Rodriguez, Sergei Levashkin, 2007-11-17 This book constitutes the refereed proceedings of the Second International Conference on GeoSpatial Semantics GeoS 2007 held in Mexico City, Mexico in November 2007. The papers are organized in topical sections on models and languages for geo ontologies, alignment and integration of geo ontologies, ontology based spatial information retrieval, formal representation for geospatial data and integration of semantics into spatial query processing.

Journal on Data Semantics XI Jeff Z. Pan, Philippe Thiran, Terry Halpin, Steffen Staab, Vojtech

Svatek, Pavel Shvaiko, John F. Roddick, 2008-12-05 Papers were invited based on their quality relevance and significance and the ability of extending their results. Extended versions prepared by authors were subject to the traditional two round scholarly review process and the authors were required to respond to all concerns expressed by the reviewers before papers were accepted. Eight papers were eventually accepted for publication in this issue. The selection of SWESE best papers eventually resulted in the acceptance of two papers. The first paper, "Experiences in the Design of Semantic Services Using Web Engineering Methods and Tools" by Brambilla, Ceri, Celino, Cerizza, Della Valle, Facca, Turati, and Tzviskou, shows how classical software engineering methods such as formal business process development and automatic code generation combine with semantic methods and tools, i.e., ontology engineering, semantic service annotation and discovery to forge a new approach to software development for the Semantic Web. In the paper, the authors present their experience in the participation to the mantic Web Service Challenge 2006 where the proposed approach achieved very good results in solving the proposed problems. The second paper, "Automatically Generated Model Transformations Using Ontology Engineering Space" by Roser and Bauer, presents an approach to using the mantic technologies to improve cross organizational modeling by automated generation of model transformations. By automated generation of mappings, it offers new possibilities for the integration of domain specific languages and legacy models in a plug play manner, making it easier for new organizations to join collaborations.

Spatial Database Systems Albert K.W. Yeung, G. Brent Hall, 2007-05-23. The decision to write this book was motivated by a number of factors. First, although several useful textbooks on spatial databases have recently been published, this is an area of spatial information science that has lagged somewhat behind the rapid advances of the technology and the profusion of books on domain specific applications. Second, much of the information pertaining to spatial database technologies is only available in scattered journal papers and conference proceedings and, prior to this book, no single effort has been made to sift through this expansive literature and unite the key contributions in a single volume. The tasks of sourcing and coherently integrating relevant contributions is daunting for students, many of whom have a substantial number of competing demands placed on them. This book should make the task of knowledge building less daunting. Third, and perhaps most importantly, an apparent trend in many spatial information science programs is to focus from first or second year undergraduate through to fourth year courses on learning to work confidently and independently with increasingly complex software tools. Hence, many courses are technical in nature and, while they continue to produce technically adept students, knowledge of the broader

aspects of spatial databases is often not as complete as it might be among graduates Some programs have sought to address this by introducing courses that focus on spatial data management However these courses are largely unsupported by a relevant and contemporary textbook **GIS for Environmental Applications** Xuan Zhu,2022-01-31 **GIS for Environmental Applications** provides a practical introduction to the principles methods techniques and tools in GIS for spatial data management analysis modelling and visualisation and their applications in environmental problem solving and decision making It covers the fundamental concepts principles and techniques in spatial data spatial data management spatial analysis and modelling spatial visualisation spatial interpolation spatial statistics and remote sensing data analysis as well as demonstrates the typical environmental applications of GIS including terrain analysis hydrological modelling land use analysis and modelling ecological modelling and ecosystem service valuation Case studies are used in the text to contextualise these subjects in the real world examples and detailed tutorials are provided in each chapter to show how the GIS techniques and tools introduced in the chapter can be implemented using ESRI ArcGIS a popular GIS software system for environmental applications and other third party extensions to ArcGIS to address The emphasis is placed on how to apply or implement the concepts and techniques of GIS through illustrative examples with step by step instructions and numerous annotated screen shots The features include Over 350 figures and tables illustrating how to apply or implement the concepts and techniques of GIS Learning objectives along with the end of chapter review questions Authoritative references at the end of each chapter GIS data files for all examples as well as PowerPoint presentations for each chapter downloadable from the companion website **GIS for Environmental Applications** weaves theory and practice together assimilates the most current GIS knowledge and tools relevant to environmental research management and planning and provides step by step tutorials with practical applications This volume will be an indispensable resource for any students taking a module on GIS for the environment **International Conference on Urban Climate, Sustainability and Urban Design** Bao-Jie He,Deo Prasad,Li Yan,Ali Cheshmehzangi,Gloria Pignatta,2024-11-11 This open access book is a proceeding of the International Conference on Urban Climate Sustainability and Urban Design in Mianyang MYUCSUD This work focuses on the latest thoughts ideas models methods solutions and practices on urban climate mitigation and adaptation through sustainable planning and design covering interdisciplinary topics in architecture urban rural planning meteorology building and construction engineering material engineering geographic sciences public health public administration computer sciences etc This book can provide students and researchers from urban planning urban design urban meteorology civil and construction engineering and urban governance with better understanding of urban climate sciences innovative ideas and tangible solutions **Handbook of Research on Innovations in Database Technologies and Applications** Viviana E.
