The Evolution Of Human Behavior Primate Models:

Evolution of Human Behavior Warren G. Kinzey, 1986-12-05 This book represents an important meeting ground in the primatology field by exploring the various primate models that have been used in the reconstruction of early human behavior. While some models are based on the proposition that a key behavioral feature such as hunting eating of seeds or monogamous mating led to the evolutionary separation of apes and humans other models suggest that one primate species such as the baboon or chimpanzee best exemplifies the behavior of our early ancestors. Several contributors to the book take the position that no single primate is a good model and contend instead that a model must be eclectic. One of the more innovative essays suggests that ancestral behavioral states can in fact be derived by comparing the behavior of all living hominid ape and human species. Additionally several other contributors analyze and discuss the concept of model making noting deficiencies in earlier models while offering suggestions for future development. Although it is true that a powerful conceptual model for reconstructing hominid behavior does not yet exist *The Evolution of Human Behavior Primate Models* suggests ways one may be constructed based on behavioral ecology and evolutionary theory

The Evolution of Human Behavior Warren G. Kinzey, 1987 *The Evolution of Human Behavior*, 1987 *Handbook of Evolutionary Psychology*

Charles Crawford, Dennis L. Krebs, 2013-03-07 Evolutionary psychology is concerned with the adaptive problems early humans faced in ancestral human environments the nature of psychological mechanisms natural selection shaped to deal with those ancient problems and the ability of the resulting evolved psychological mechanisms to deal with the problems people face in the modern world. Evolutionary psychology is currently advancing our understanding of altruism moral behavior family violence sexual aggression warfare aesthetics the nature of language and gender differences in mate choice and perception. It is helping us understand the relationship between cognitive science developmental psychology behavior genetics personality and social psychology. Foundations of Evolutionary Psychology provides an up to date review of the ideas issues and applications of contemporary evolutionary psychology. It is suitable for senior undergraduates first year graduate students or professionals who wish to become conversant with the major issues currently shaping the emergence of this dynamic new field. It will be interesting to psychologists cognitive scientists and anyone using new developments in the theory of evolution to gain new insights into human behavior

Great Ape Societies William C. McGrew, Linda F. Marchant, Toshisada Nishida, 1996-07-28 The great apes chimpanzees bonobos gorillas and orangutans are our closest living relatives sharing a common ancestor only five million years ago. We also share key features such as high intelligence omnivorous diets prolonged child rearing and rich social lives. The great apes show a surprising diversity of adaptations particularly in social life ranging from the solitary life of orangutans through patriarchy in gorillas to complex but different social organisations in bonobos and chimpanzees. As great apes are so close to humans comparisons yield essential knowledge for modelling human evolutionary origins. *Great Ape Societies* provides comprehensive up to date syntheses of

work on all four species drawing on decades of international field work zoo and laboratory studies It will be essential reading for students and researchers in primatology anthropology psychology and human evolution The Adapted Mind Jerome H. Barkow,Leda Cosmides,John Tooby,1992 Although researchers have long been aware that the species typical architecture of the human mind is the product of our evolutionary history it has only been in the last three decades that advances in such fields as evolutionary biology cognitive psychology and paleoanthropology have made the fact of our evolution illuminating Converging findings from a variety of disciplines are leading to the emergence of a fundamentally new view of the human mind and with it a new framework for the behavioral and social sciences First with the advent of the cognitive revolution human nature can finally be defined precisely as the set of universal species typical information processing programs that operate beneath the surface of expressed cultural variability Second this collection of cognitive programs evolved in the Pleistocene to solve the adaptive problems regularly faced by our hunter gatherer ancestors problems such as mate selection language acquisition co operation and sexual infidelity Consequently the traditional view of the mind as a general purpose computer tabula rasa or passive recipient of culture is being replaced by the view that the mind resembles an intricate network of functionally specialized computers each of which imposes contentful structure on human mental organization and culture The Adapted Mind explores this new approach evolutionary psychology and its implications for a new view of culture

The Biological Bases of Human Behavior Geoffrey Grant Pope,2000 The Biological Bases of Human Behavior accomplishes what numerous introductory textbooks have failed to do present an evolutionary explanation of why it is we do what we do This comprehensive text brings together a diverse number of traditionally separate disciplines including paleoanthropology psychology and sociology in its attempt to understand human traits Rich in controversial topics this text integrates subjects such as paleontology speech the structure of the brain Eve and the rather odd way in which humans reproduce Written as a narrative this excellent learning tool relates modern behavior to the past environments stresses and challenges still evident in the modern human world

Reaching Into Thought Anne E. Russon, Kim A. Bard, Sue Taylor Parker,1998-11-26 What special qualities of mind set the great apes apart from other nonhuman primates and indeed from ourselves In this book field and laboratory researchers show that the great apes have high level abilities in both social and ecological domains including tool use pretense self awareness deception consolation teaching and culture itself Great apes are also shown to be capable of thinking at symbolic levels traditionally considered to be uniquely human Here the mechanisms involved in building these abilities especially the lengthy developmental and enculturation processes are emphasized showing how new discoveries are changing views on how primates and human intelligence evolved This book is for anyone interested in current research and theoretical views of great ape cognition

Hierarchy and Democracy Albert Somit, Rudolf Wildenmann,1991 An international gathering of scholars examines democratic theory in the light of recent discoveries by biologists ethologists and psychologists In this book contributors do not attempt to find a single solution to the theoretical problem of the existence of elites in a democratic system but to make a serious approach to examining various aspects of that problem Albert Somit

raises the political philosophical problem of the contradiction between the existence of elites and democratic concepts Benson E Ginsburg views the heritage of the biological nature of our own species while Steven A Peterson analyzes whether dominance behavior and political hierarchies may make democracy an unattainable ideal James N Schubert explores the effects of dominance hierarchy in small groups and Ulrich M ller analyzes the dynamic stability conditions for populations with an egalitarian versus a despotic distribution of power and resources Jean A Laponcedraws attention to the phenomenon that our up down mental structure relating people events and thoughts is not neutral and Odelia Funke discussing concepts of anarchy and various attempts to successfully live in an anarchistic society asks whether dominance is an inevitable part of human society Finally John C Wahlke criticizes the rational choice theory and its attempt to explain voting the essential element of democracy arguing that to understand voting a realistic conception of individual choice processes is necessary
