Wallach, 2008 This book presents a unique approach to resolving the paradox of God and science without contradicting the principles of either science or religion A selective non mathematical history of physical science is used to convince the reader that the laws of nature as understood by physical scientists are well supported The criteria for judging these laws will be used to judge whether or not the ideas of God that will be developed are valid A selective history of the major Western religions is presented as an example of how religions generally developed Their commonalities are explored Past and current miracles are discussed The author describes the miracles he has witnessed and how he has resolved their reality with the realities of his scientific training In this light souls and prayer are discussed To integrate the two apparently disparate realms of religion and science the author

proposes extensions of the known laws of nature which would allow God to function in the ways many believe. These extensions are totally consistent with the scientific principles of quantum mechanics, relativity, and string theory. Having shown that it is possible that God could exist, Gödel's ontological proof is used to show that God does exist. However, in doing so, it requires that all understandings of God that all religions must be equally valid in the sight of God. The validity of this conclusion is then discussed using the same criteria which are applied to validating Physical law. The presentation is not THE answer, rather just ONE possible answer to the question regarding the nature of God. It is offered as an outline to help the reader understand that each religion is correct for its followers; therefore, all people's religious views are individually acceptable and should be respected.

The Sea Floor Eugen Seibold, Wolfgang Berger, 2017-05-29 This textbook deals with the most important items in Marine Geology including some pioneer work. The list of topics has grown greatly in the last few decades beyond the items identified by Eugen Seibold as central and now includes prominently such things as methane and climate change, that is the carbon cycle and the Earth system as a whole. Relevant geophysical, geochemical, sedimentological, and paleontological methods are shortly described. They should allow the reader to comment on new results about plate tectonics, marine sedimentation from the coasts to the deep sea, climatological aspects, paleoceanology, and the use of the sea floor. The text tries to transmit to the reader excitement of marine geological research both aboard and in modern laboratories. Basic mineralogical, geochemical, biological, and other relevant data and a detailed list of books and symposia are given in an Appendix. This Introduction builds on the third edition of *The Sea Floor* by E. Seibold and W. H. Berger. While much of the original text was written by Seibold, a considerable portion of the material presented in this edition is new, taking into account the recent great shift in marine geological research, some of it with great relevance to human concerns arising in a rapidly changing world.
