The Oxford Book of Birds Bruce Campbell, 1964      **The Oxford Book of Birds**, 1980      **The Birds of Oxfordshire** O. V. Aplin, 1889      **The Birds of the Oxford District** Francis Charles Robert Jourdain, 1926      The Academy, 1886      *The Sensory Ecology of Birds* Graham R. Martin, 2017-03-30

Birds are renowned for their exceptional vision and the way that this enables them to survive and navigate the world in such a unique way. However, it is now recognised that avian behaviour is guided by information drawn from many different senses which are then used in integrated and complementary ways to answer the many different sensory challenges posed by specific environments and particular tasks. Understanding how sensory information is used by birds has important applications in conservation such as providing vital insights into why birds are prone to collisions with structures like power lines and wind turbines and why so many diving birds become entrapped in nets. A sensory ecology approach suggests how these problems can be mitigated. *The Sensory Ecology of Birds* ranges widely across species environments and behaviours to present a synthesis that challenges previous assumptions about the information that controls the behaviour of birds. A bird may use a wide range and combination of sensory information that comes from sight, hearing, smell, mechanoreception, taste and magnetoreception. It may also include specific refinements of senses such as echolocation and remote touch from the bill. The book recognises that there are many complex and subtle trade-offs and complementarities of information between different types of sensory information. This accessible text will be of interest to a wide ornithological readership from undergraduates to researchers as well as a broader audience of behavioural ecologists and evolutionary biologists.

**A Dictionary of Birds** Alfred Newton, 1896      *Ten Thousand Birds* Tim Birkhead, Jo Wimpenny, Bob Montgomerie, 2014-02-16

A beautifully illustrated history of modern ornithology. *Ten Thousand Birds* provides a thoroughly engaging and authoritative history of modern ornithology, tracing how the study of birds has been shaped by a succession of visionary and often controversial personalities and by the unique social and scientific contexts in which these extraordinary individuals worked. This beautifully illustrated book opens in the middle of the nineteenth century when ornithology was a museum-based discipline focused almost exclusively on the anatomy, taxonomy and classification of dead birds. It describes how in the early 1900s pioneering individuals such as Erwin Stresemann, Ernst Mayr and Julian Huxley recognized the importance of studying live birds in the field and how this shift thrust ornithology into the mainstream of the biological sciences. The book tells the stories of eccentrics like Colonel Richard Meinertzhagen, a pathological liar who stole specimens from museums and quite likely murdered his wife, and describes the breathtaking insights and discoveries of ambitious and influential figures such as David Lack, Niko Tinbergen, Robert MacArthur and others who through their studies of birds transformed entire fields of biology. *Ten Thousand Birds* brings this history vividly to life through the work and achievements of those who advanced the field. Drawing on a wealth of archival material and in-depth interviews, this fascinating book reveals how research on birds has contributed more to our understanding of animal biology.

The book is not a history of the BTO but many of the Trust's achievements helped fashion the development and direction of ornithology over the decades and major aspects of the Trust's work rightly have detailed treatment. The book ranges widely: it looks at the changing bird as well as the changing bird watcher and records the work of related conservation bodies; it considers the future and the past and includes an extensive section of useful facts and figures whilst never losing sight of the central theme which is the book's title.
