Dow, Clyde G. Reed, 2023-01-05 Around 15 000 years ago almost all humans lived in small mobile foraging bands By about 5 000 years ago the first city states had appeared This radical transformation in human society laid the foundations for the modern world We use economic logic and archaeological evidence to explain six key elements in this revolution sedentism agriculture inequality warfare cities and states In our approach the ultimate cause of these events was climate change We show how shifts in climate interacted with geography to drive technological innovation and population growth The accumulation of

population at especially rich locations led to creation of group property rights over land stratification into elite and commoner classes and warfare over land among rival elites This set the stage for urbanization based on manufacturing or military defense and for elite controlled states based on taxation Our closing chapter shows how these developments eventually resulted in contemporary global civilization
