**The Game of Science Education** Jeffrey Weld,2004 An accessible and authoritative approach to effective science teaching this text is the work of 16 contributors who each employ a single metaphor that will resonate with readers that science education can and should be considered an exciting game With Windows Into the Classroom personal accounts and The Game in Action vignettes students are provided with practical applications throughout the book Many contributors to this book were involved in the development and draft review of the National Science Education Standards and therefore fully appreciate the importance of overtly linking research based commentary and recommendations to the Standards As a result the entire work is steeped in a current research foundation tied closely to the National Science Education Standards Features of this new text Windows into the classroom personal accounts and The Game in Action vignettes provide practical applications throughout the book Written in accessible first person accounts each contributor takes a conversational

approach that will appeal to a broad audience of readers. Introductions establishes the game metaphor that sustains the chapter and weaves throughout the book. Conclusions leaves the reader with upbeat and practical suggestions for effective science teaching. Author Biographies highlight the distinguished record of achievement of each contributor. Additional Resources at the end of each chapter provide suggestions of useful readings, websites and other instructional instruments. Reflection questions intended to provoke the reader to apply the ideas and concepts unearthed in the chapter to his or her own unique vantage or condition as an educator. The research base of this proposal is a 10 on a scale of 1-10. I'm impressed with the style and theme of the essays my students would learn a great deal regarding the practical application of science education. Professor David R. Wetzel, Bloomsburg University. I very much like the use of the analogy of a Game used by the authors. The text is VERY readable. Professor Molly Weinburgh, Georgia State University. The writing style and use of the game metaphor will undoubtedly grab undergraduate alternate entry and graduate student interest. Professor Warren J. DiBiase, EdD, University of North Carolina Charlotte. Author Bio: A decorated veteran of high school science teaching, Jeff now researches effective science teaching and learning testing innovations on his students at Northern Iowa. He also develops curriculum consults at local and national levels and serves science education organizations. He has published research and philosophy in Educational Leadership, Phi Delta Kappa, The Science Teacher, The American Biology Teacher, Education Week, the Journal of College Science Teaching, the Journal of Science Teacher Education, the International Journal of Science Education and Teacher magazine. Krajcik, Charlene Lochbihler, Czerniak, Carl F. Berger, 2003. This text provides an overview of current science teaching practices for the elementary and middle grades. The authors, top scholars in the field of science education, believe that all children should develop an in-depth and meaningful understanding of scientific concepts and processes. To achieve this, the text utilizes the Project Based Approach. Project based science stresses that science teaching should emphasize the active engagement of students in science rather than teachers telling students information. Each chapter has several Portfolio Activity boxes that provide active learning experiences or reflections for the student. Like the first edition, the text includes numerous strategies in each chapter that help both new and experienced teachers understand how to teach science in an active and engaging manner. The text also shows teachers how to implement the National Science Education Standards (NSES) and constructivist strategies. A NSES marginal feature keys content to the standards. Moreover, this textbook helps teachers learn how to implement all of today's major reforms, not just read about them.     **Journal of Engineering Education**, 2005     *Teaching Science in Elementary and Middle School* Joseph S. Krajcik, Charlene Lochbihler, Czerniak, 2007.
